Christopher Brown Head Of IT Manifesto

My Name is Christopher and I am a 2nd year Digital Security, Forensics and Ethical Hacking student with a love for Technology and I am standing to be Radio Caley's next Head Of IT.

I have been involved with Radio Caley for a year now and I've seen what it takes to be an active and involved member of the Radio Caley Committee.

In my opinion the Role of Head Of IT is very important in Radio Caley, especially with the radio being based on the internet. Without this role and team behind it the station would not have the platform to broadcast efficiently and without hinderance.

If elected for this position, I will work to:

- Ensure there is always someone with the technical knowhow to be able to help should a problem with the system.

- Build the IT team and give relevant training to ensure that the it team is able to continue in future years.

- Ensure that the show schedule on the website is always up to date and includes a show overview where presenters can give a description of what their show is about.

- Maintain the up time of the website and broadcast.

- Add suggested ideas to the website or studio systems without compromising the operational ability of the station.

- Aid other committee members with there section when required to.

I understand that I may not be the most experienced for this position, but I am very eager and committed to enhance my knowledge of the type of server and structure of the website, to ensure that should a problem arise I am able to solve it as quickly as I can.

I hope I've shown you that I have the skills and drive to be Radio Caley's next Head Of IT.
