The fascinating story of our most familiar features. An intriguing and unique journey of self-discovery, exploring the evolutionary, social and psychological aspects of the face. This volume marks the first time that a collection of contemporary facial scoring techniques and their utility, whether clinical, experimental, theoretical, or otherwise, follows an historical introduction of the area, thereby recording the developmental history of this science. This title assesses EU law and policy using a novel and alternative framework based on the notion of humaneness. Apartheid and the struggle against institutionalized injustice allowed heroes to come to the fore and brought hope for the future. *Emotion in the Human Face: Guidelines for Research and an Integration of Findings* reviews research findings about the link between the face and emotion and provides some guidelines for study of this complicated but intriguing phenomenon. Some of the conceptual ambiguities that have hindered research and the methodological decisions that must be made in planning research on the face and emotion are discussed. How past investigators handled these matters is presented critically, and a set of standards is offered. This book is comprised of 21 chapters and begins with an overview of questions about how the face provides information about emotion, with emphasis on evidence based on scientific research (largely in psychology). The reader is then introduced to conceptual ambiguities and methodological decisions related to research on the face-emotion connection (including sampling), along with some important research findings. In particular, emotion categories and dimensions that observers can judge on the basis of facial behavior are analyzed, and whether such judgments can be accurate. The similarities and differences in facial behavior across cultures are also considered, along with the relative contribution of facial behavior and contextual information to the judgment of emotion. This monograph is intended primarily for students of psychology, anthropology, ethology, sociology, and biology, as well as those planning or already conducting research on the face. *Politics with a Human Face* presents a holistic understanding of identity formation in post-Soviet Europe, arguing that since politics is fundamentally a human affair. In order to adequately understand it, one needs to understand its human side first. Drawing on the thought of Dilthey, Ricoeur and Plato, the author employs empathy as a method, together with visual and historical analysis, to analyse the role of human experience in post-Soviet politics. As a result, the book offers a theoretical approach for assessing influence of the non-rationalistic factors, such as associative symbolism, human experience, political images and historical narratives, in both domestic and foreign affairs. A study at the juncture of Social Sciences and Humanities, *Politics with a Human Face* explores a number of cases, including Estonia, Lithuania, Poland and Russia, as well as the ongoing conflict in Ukraine, examining issues of liminal transition, 'far-right' movements, victimhood, ethnic conflict and political paradoxes. Seeking to shed light on the region's agency and perception of both its own political and existential situation, and that of the surrounding world, this book constitutes a timely and original contribution to understanding the post-Soviet Europe. The original edition of *Emotion in the Human Face*, published in 1972, was the first volume to evaluate and integrate all the research on facial expression of emotion since Darwin's *The Expression of Emotions in Man and Animals* was published in 1872. It presented a detailed, critical discussion of research involving the face and emotion, focusing on the complex conceptual and methodological issues involved, and settling many past controversies, such as whether the face provides accurate information about emotion, and whether some facial expressions are universal. This special Malor Books edition includes a new Preface, three additional chapters, and a new conclusion summarizing Ekman's final views on the field that he has played such a large part in creating. Contributors to this work include: Paul Ekman, Phoebe Ellsworth, Wallace V. Friesen, Joseph C. Hager, Harriet Oster, Maureen O'Sullivan, William K. Redican and Silvan S. Tomkins. Within the last fifty years, most developing countries have made health and educational advances that took nearly two centuries in the industrialized countries. This book presents retrospective studies of ten developing countries that managed to exceed the scope and pace of social achievement of other developing countries, with many of their social indicators now being comparable with those of industrialized countries. This book attempts to learn the lesson of their success. Half the ten countries studied have combined rapid economic growth with social achievement, and are now considered to have high-performing economies. Significantly, the high-growth economies achieved social progress very early in the development process, when national incomes were still low. Others grew more slowly and experienced interrupted growth. However, they demonstrate that it is possible to achieve a high level of social development even without a thriving economy, if the government sets the right priorities. All ten countries achieved sustained improvement in child survival and educational levels despite low incomes, precisely because the investment required for the provision of basic services is low in cost but high in effectiveness. The cases chosen represent all the developing regions, and offer a variety of routes to high educational status, decreased child mortality, and low fertility. The book provides valuable guidance to policymakers in developing countries in every region seeking to replicate these successful social experiments. This volume collects essays from academics and practitioners from a diversity of areas and perspectives in order to discuss water security at various levels and to illuminate the central idea of water security: its focus on the individual. Beginning with the big picture, this book aims to illustrate the depth of the water security crisis and its interconnections with other aspects of societal development. It particularly draws a connection to the 2030 Agenda for Sustainable Development, and discusses that challenges faced in meeting the 17 sustainability development goals (SDG) by the year 2030. Moving from international to domestic and community perspectives, this book provides a unique analysis of issues and solutions to the water issues we face today in light of the ever looming global changes brought on by climate change. Over the past few decades the recognition of our common need for water has increased, as policymakers have sought to place more focus on the individual within policy. After the recognition of water and sanitation as a fundamental human right by the United Nations General Assembly in 2010, there is increasing recognition of the individual as the building block for the struggle for water security. This reality also intersects with adverse impacts of global climate change, and the book responds to the broader question: will clean and safe water be available where we need it and when we need it in the future? The past few decades have seen an explosion of research on causal reasoning in philosophy, computer science, and statistics, as well as descriptive work in psychology. In *Causation with a Human Face*, James Woodward integrates these lines of research and argues for an understanding of how each can inform the other: normative ideas can suggest interesting experiments, while descriptive results can suggest important normative concepts. Woodward's overall framework builds on the interventionist treatment of causation that he developed in *Making Things Happen*. Normative ideas discussed include proposals about the role of invariant or stable relationships in successful causal reasoning and the notion of proportionality. He argues that these normative ideas are reflected in the causal judgments that people actually make as a descriptive matter. Woodward also discusses the common philosophical practice—particularly salient in philosophical accounts of causation—of appealing to intuitions or judgments about cases in support of philosophical theses. He explores how, properly understood, such appeals are not different in principle from appeals to results from empirical research, and demonstrates how they

may serve as a useful source of information about causal cognition. Beatrice Lacey is passionate about Human Face, the charity for Third World children she helped to found, and its co-founder Adam Carnegie. She has learned to turn a blind eye to some strange goings on, however; parties for donors who don't seem the philanthropic type and a merry-go-round of 'housekeepers'. It's best not to think about that. But when the latest housekeeper, Eva, suddenly disappears, the police and DI Kelso Strang are called in. Keen to move on from recent personal horrors, Strang revels in the responsibility the investigation affords, as a former sniper, he has no problems with making solitary decisions. But when he and the team make some fatal errors, Strang has his work cut out to avoid the case ending in disaster and death. Explores how decision-makers can manage uncertainty that varies in both kind and severity by extending and supplementing Bayesian decision theory. The human face was said to be rediscovered with the advent of motion pictures, in which it is often viewed as expressive locus, as figure, and even as essence of the cinema. But how has the modern, technological, mass-circulating art revealed the face in ways that are also distinct from any other medium? How has it altered our perception of this quintessential incarnation of the person? The archaic powers of masks and icons, the fashioning of the individual in the humanist portrait, the modernist anxieties of fragmentation and de-figuration—these are among the cultural precedents informing our experience in the movie theatre. Yet the moving image also offers radical new confrontations with the face: Dreyer's *Passion of Joan of Arc*, Donen's *Funny Face*, Hitchcock's *The Wrong Man*, Bresson's enigmatic *Au hasard Balthazar*, Antonioni's *Screen Test*, Warhol's filmic portraits of celebrity and anonymity are among the key works explored in this book. In different ways these intense encounters manifest a desire for transparency and plenitude, but—especially in post-classical cinema—they also betray a profound ambiguity that haunts the human countenance as it wavers between image and language, between what we see and what we know. The spectacular impact of the cinematic face is uncannily bound up with an opacity, a reticence. But is it not for this very reason that, like faces in the world, it still enralls us? Profiles Jesus Christ as the human face of God, taking into the account the multiple ways his life has been viewed and retold, and dramatizing the transformation from a man to a myth. This biographical collection highlights individuals who made outstanding achievements in the arenas of pharmaceuticals and biotechnology. *Pharmaceutical Achievers* presents chronologically the major directions of pharmaceutical research and, in their historical context, the breakthroughs in treating various diseases. It concludes with a look at tomorrow's medicines. This work is particularly useful in the classroom, where its accounts of challenges and triumphs may inspire students to consider careers that support pharmaceutical research and development. When Andrew—a second-hand-book dealer—comes across a pile of photographs from police archives, he decides to exhibit them. But then the gallery is raided the day before the opening, and the photos seized with surprising violence. It soon becomes clear that someone, somewhere, wants to keep the images hidden. Who? Why? And who can Andrew turn to for help—in a world where kidnap, subterfuge and even murder are the norm, and where no one is safe or above suspicion? 'A sophisticated literary thriller set on the seamier fringe of Rome's gay scene, a magnet for the lonely and displaced located a long way off the tourist trail' *Guardian* 'Charles Lambert writes as if his life depends on it. He takes risks at every turn' Hannah Tinti 'Charles Lambert is a seriously good writer' Beryl Bainbridge 'A slow-burning, beautifully written crime story that brings to life the Rome that tourists don't see' *Daily Telegraph* Until now, *Fresh Expressions* has been about starting and sustaining mission initiatives among people with little or no church contact. As these projects mature, pastoral problems easily arise—how do you integrate the old with the new? How do you get an established congregation to change its views and practices? How do you cope with conflict? What if newcomers challenge set patterns of church behaviour rather than conform with them? The publication is structured for use for training in local churches, theological colleges and as a research tool in postgraduate study. Institutions do not decide whom to destroy or to kill, whether to make peace or war; those decisions are the responsibility of individuals. This book argues that the most important aspect of conflict resolution is for antagonists to understand their opponents as individuals, their ambitions, their pains, the resentments that condition their thinking and the traumas they do not fully themselves grasp. Gabrielle Rifkind and Giandomenico Pico here present two very different experiences of international relations—Rifkind as a psychotherapist now immersed in the politics of the Middle East, and Pico as a career diplomat with a long and successful record as a negotiator at the UN. Should we talk to the enemy? What happens if the protagonists are nasty and brutish, tempting policy-makers to retaliate? How do nations find the capacity not to hit back, trapping themselves in endless cycles of violence? Presenting a unique combination of psychological theories, geopolitical realities and first-hand peace-making experience, this book sheds new light on some of the worst conflicts in the modern world and demonstrates, above all, how empathy can often be far more persuasive than the most fearsome weapons. By exploring the question of intervention versus non-intervention, and examining how the changing nature of warfare and technology has both armed the warmonger, whilst empowering the individual through social media, this is a highly topical, comprehensive overview on international diplomacy and the complexities of peace-making. The principal editor of the *Catechism of the Catholic Church*, presents the sources of meditation on the mystery of God's human face from the great Masters of early Christianity. Artists and theologians have meditated upon the mystery of God's human countenance and tried to express it. This book seeks to present the great sources of this meditation—sources which today are widely unknown, or have become foreign or obscure. These sources are above all the great masters of early Christianity. In their meditation upon Christ, Bishop Schonborn seeks the sources of the art on the Icon. The reader will find not only an engaging introduction to the meaning and beauty of Icons, but an invitation to draw closer to the One who inspired these Masters of theological expression and holy art. Includes beautiful color Icon illustrations. "Book creators are at least as idiosyncratic as readers" could be the unofficial motto of this 16th annual seminar held in July 1998 in Edinburgh. A baker's dozen of essays give accounts of a brilliant but unpredictable 18th-century printer, a power struggle between a devious author and the London College of Physicians, and assorted other characters and early aspects of book publishing, selling, and collecting in the UK. Annotation copyrighted by Book News, Inc., Portland, OR Sir Samuel Brittan, the doyen of British economic journalists, explores the connections between economics, ethics, and politics while assessing the merits and defects of capitalism in this post-socialist era. In this social and cultural history of Czechoslovakia's "gentle revolution," James Krapfl shifts the focus away from elites to ordinary citizens who endeavored—from the outbreak of revolution in 1989 to the demise of the Czechoslovak federation in 1992—to establish a new, democratic political culture. Unique in its balanced coverage of developments in both Czech and Slovak lands, including the Hungarian minority of southern Slovakia, this book looks beyond Prague and Bratislava to collective action in small towns, provincial factories, and collective farms. Through his broad and deep analysis of workers' declarations, student bulletins, newspapers, film footage, and the proceedings of local administrative bodies, Krapfl contends that Czechoslovaks rejected Communism not because it was socialist, but because it was arbitrarily bureaucratic and inhumane. The restoration of a basic "humanness"—in politics and in daily relations among citizens—was the central goal of the revolution. In the strikes and demonstrations that began in the last weeks of 1989, Krapfl argues, citizens forged new symbols and a new symbolic system to reflect the humane, democratic, and nonviolent community they sought to create. Tracing the course of the revolution from early, idealistic euphoria through turns to radicalism and ultimately subversive reaction, *Revolution with a Human Face* finds in Czechoslovakia's experiences lessons of both inspiration and caution for people in other countries striving to democratize their governments. One of America's great philosophers says the time has come to reform philosophy. Putnam calls upon philosophers to attend to the gap between the present condition of their subject and the human aspirations that philosophy should and once did claim to represent. His goal is to embed philosophy in social life. Thomas Piketty's *Capital in the Twenty-First Century* initiated a great debate not just about inequality but also regarding the failures found in the economic models used by theoreticians and practitioners alike. *Wealth of Persons* offers a totally different perspective that challenges the very terms of the debate. The Great Recession reveals a great existential rift at the core of certain economic reflections, thereby showing the real crisis of the crisis of economics. In the human sciences we have created a kind of "Tower of Babel" where we cannot understand each other any longer. The "breakdowns" occur equally on the personal, social, political, and economic levels. There is a need for an "about-face" in method to restore harmony among dissociated disciplines. *Wealth of Persons* offers a key to such a restoration, applying insights and analysis taken from different economic scholars, schools of thought, philosophical traditions, various disciplines, and charismatic entrepreneurs. *Wealth of Persons* aims at recapturing an adequate understanding of the acting human person in the economic drama, one that measures up to the reality. The investigation is a passport allowing entry into the land of economic knowledge, properly unfolding the anthropological meaning of the free economy. Warfare is hugely important. The fates of nations, and even continents, often rests on the outcome of war and thus on how its

practitioners consider war. The Human Face of War is a new exploration of military thought. It starts with the observation that much military thought is poorly developed - often incoherent and riddled with paradox. The author contends that what is missing from British and American writing on warfare is any underpinning mental approach or philosophy. Why are some tank commanders, snipers, fighter pilots or submarine commanders far more effective than others? Why are many generals sacked at the outbreak of war? The Human Face of War examines such phenomena and seeks to explain them. The author argues that military thought should be based on an approach which reflects the nature of combat. Combat - fighting - is primarily a human phenomenon dominated by human behaviour. The book explores some of those human issues and their practical consequences. The Human Face of War calls for, and suggests, a new way of considering war and warfare. A scientist examines the physiological, social, psychological, evolutionary, and artistic aspects of the human face Adam Wilkins draws on studies of nonhuman species, the fossil record, genetics, and molecular and developmental biology to reconstruct the evolution of the human face and its inextricable link to our species' evolving social complexity. The neural and muscular mechanisms that allowed facial expressions also led to speech, which is unique to humans. John W. Budd contends that the turbulence of the current workplace and the importance of work for individuals and society make it vitally important that employment be given "a human face." Contradicting the traditional view of the employment relationship as a purely economic transaction, with business wanting efficiency and workers wanting income, Budd argues that equity and voice are equally important objectives. The traditional narrow focus on efficiency must be balanced with employees' entitlement to fair treatment (equity) and the opportunity to have meaningful input into decisions (voice), he says. Only through a greater respect for these human concerns can broadly shared prosperity, respect for human dignity, and equal appreciation for the competing human rights of property and labor be achieved. Budd proposes a fresh set of objectives for modern democracies--efficiency, equity, and voice--and supports this new triad with an intellectual framework for analyzing employment institutions and practices. In the process, he draws on scholarship from industrial relations, law, political science, moral philosophy, theology, psychology, sociology, and economics, and advances debates over free markets, globalization, human rights, and ethics. He applies his framework to important employment-related topics, such as workplace governance, the New Deal industrial relations system, comparative industrial relations, labor union strategies, and globalization. These analyses create a foundation for reforming employment practices, social norms, and public policies. In the book's final chapter, Budd advocates the creation of the field of human resources and industrial relations and explores the wider implications of this renewed conceptualization of industrial relations. Computation is ubiquitous: modern life would be inconceivable without it. Written as a series of conversations with influential computer scientists, mathematicians and physicists, this book provides access to the inner thinking of those who have made essential contributions to the development of computing and its applications. You will learn about the interviewees' education, career path, influences, methods of work, how they cope with failure and success, how they relax, how they see the future, and much more. The conversations are presented in jargon-free language suitable for a general audience, but with enough technical detail for more specialized readers. The aim of the book is not only to inform and entertain, but also to motivate and stimulate. Contents: Computing Science: Formal Methods (Dines Bjørner) Computer System and Network Performance Analysis (Erol Gelenbe) From Theoretical Computer Science to Behavioural Programming, Biology and Smell (David Harel) Computational Complexity (Juris Hartmanis) From Theory to Library of Efficient Data Types and Algorithms (LEDA) and Algorithm Engineering (Kurt Mehlhorn) Theoretical Computer Science (Arto Salomaa) Concurrent Systems Specification and Verification (Joseph Sifakis) Information-Based Complexity (Joseph F Traub) A Stroll Through the Gardens of Computer Science (Ian H Witten) Computing in Biology, Mathematics and Physics: Experimental Mathematics (Jon Borwein) Constructive Mathematics (Douglas Bridges) Mathematics, Physics, Biology and Philosophy (Gregory Chaitin) Qualitative Computing (Françoise Chatelin) Computability, Complexity Theory, Reverse Mathematics and Algorithmic Information Theory (Rod Downey) Informatics, Physics and Mathematics (Jozef Gruska) Computations and Natural Sciences (Giuseppe Longo) My Life Is Not a Conveyor Belt (Yuri Manin) Mathematical Analysis, Languages and Fractals (Solomon Marcus) Information, Quantum Mechanics and Probabilities (Mioara Mugur-Schachter) Natural Computing (Grzegorz Rozenberg) Social Aspects of Computing: Internet (Brian E Carpenter) Systems, Art and CONICYT (Eric Goles) Mathematics, Computer Science and Life (Yuri Gurevich) Computing and Thinking about the Future (Hermann Maurer) From Theory and Practice in Computing to Research Ethics and the Surveillance State (Moshe Y Vardi) Compiler Construction and Dagstuhl (Reinhard Wilhelm) Readership: Readers and specialists with a background in computer science interested in the lives and motivations of eminent computer scientists. Key Features: Unique format and treatment Features eminent scientists Includes stimulating conversations with renowned scientists Keywords: Computing; Conversations Reviews: "Cristian Calude has assembled a remarkable collection of fascinating essays by distinguished computer scientists concerning the myriad ways in which computers impact our lives at this time and how they will do so in the future." Martin Davis author of The Universal Computer "Let us thank Cristian Calude for having produced this accurate and inspiring book on the human aspects of computer science." Maurice Nivat French Academy of Sciences The most publicized new philosopher of France argues that philosophy especially Marxist philosophy, has failed to explain history and systematically attacks Leftist mythology and its notion of an ideal society. The authors invited more than 100 journalists worldwide to use photographs, charts and essays to explore the world of big data and its growing influence on our lives and society. This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work was reproduced from the original artifact, and remains as true to the original work as possible. Therefore, you will see the original copyright references, library stamps (as most of these works have been housed in our most important libraries around the world), and other notations in the work. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. As a reproduction of a historical artifact, this work may contain missing or blurred pages, poor pictures, errant marks, etc. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant. Picture processing by computer has found its application in various fields. Character recognition has shown the most practical success. Furthermore, the techniques span much more sophisticated applications such as interpretation of biomedical images and X-ray films, measurement of images in nuclear physics, processing of a large volume of pictorial data sent from the satellites, etc. The particular problem attacked in this thesis is computer analysis and identification of human faces. Pictures of human faces are successfully analyzed by a computer program which extracts face feature points, such as nose, mouth, eyes, and so on. The program was tested with more than 800 photographs. The research has been done with main emphasis on the method of how to incorporate the picture structures into the picture analysis program. The success of the program is due to the employment of a flexible picture analysis scheme with feedbacks, which will be described in the next chapter. An experiment on face identification of 20 people was also conducted. I-1. Picture Analysis and Recognition- New Aspects When shown the pictures of the human face of Fig. 1-1, we can immediately tell the positions of the nose, mouth and eyes; and more- over, we can say that both pictures surely portray the same person. Picture analysis and recognition by computer concerns itself with this type of two-dimensional image processing. In this thesis, I selected human-face pictures as objects of processing. This book provides a comprehensive examination of the human face, providing fascinating information from biological, cultural, and social perspectives. • A complete bibliography of sources and index of subjects • Includes 100 images, numerous sidebars, and interesting "pop-out" quotes related to the face A complete guide to creating realistic portraits in wood from a champion carver. Learn the techniques for carving hair, skin, muscle and more. Following a step-by-step project with more than 350 color photos and 50 drawings that provide useful anatomical references, you'll be guided to completely sculpt the piercing features of a Native American warrior wearing a wolf headdress. By the author of Honest to God and The Priority of John. This hilarious, highly original series, which so astutely captures the odd preoccupations of middle schoolers, will appeal to the many fans of the Origami Yoda series and such gross-out classics as How to Eat Fried Worms and Freckle Juice. Lyle Hertzog and his friends Marilla and Dave are the Qwickpick Adventure Society, three kids who seek out adventure in their seemingly quiet hometown of Crickenburg. On the hunt for their next big mission—something to top the Fountain of Poop, if that's even possible—the kids overhear a construction worker telling his buddies about a rat with a human face he saw in the basement of an old research facility. The decision is unanimous: the next adventure for the Qwickpick Society is on! But when their trip to find the

rat doesn't go quite as expected, the trio gets into big trouble. Will the second adventure for the Qwikipick Society also be their last?
