On the Origins of Cognitive Science Oct 07 2020 An examination of the fundamental role cybernetics played in the birth of cognitive science and the light this sheds on current controversies. The conceptual history of cognitive science remains for the most part unwritten. In this groundbreaking book, Jean-Pierre Dupuy—one of the principal architects of cognitive science in France—provides an important chapter: the legacy of cybernetics. Contrary to popular belief, Dupuy argues, cybernetics represented not the anthropomorphization of the machine but the mechanization of the human. The founding fathers of cybernetics—some of the greatest minds of the twentieth century, including John von Neumann, Norbert Wiener, Warren McCulloch, and Walter Pitts—intended to construct a materialist and mechanistic science of mental behavior that would make it possible at last to resolve the ancient philosophical problem of mind and matter. The importance of cybernetics to cognitive science, Dupuy argues, lies not in its daring conception of the human mind in terms of the functioning of a machine but in the way the strengths and weaknesses of the cybernetics approach can illuminate controversies that rage today—between cognitivists and connectionists, eliminative materialists and Wittgensteinians, functionalists and anti-reductionists. Dupuy brings to life the intellectual excitement that attended the birth of cognitive science sixty years ago. He separates the promise of cybernetic ideas from the disappointment that followed as cybernetics was rejected and consigned to intellectual oblivion. The mechanization of the mind has reemerged today as an all-encompassing paradigm in the convergence of nanotechnology, biotechnology, information technology, and cognitive science. The tensions, contradictions, paradoxes, and confusions Dupuy discerns in cybernetics offer a cautionary tale for future developments in cognitive science.

Machinery of the Mind Nov 07 2020 In the spring of 1987, I was in Havana, Cuba, where I was participating in planning a large-scale longitudinal study of the neurophysiological, neurochemical, and behavioral characteristics of cohorts of patients with cerebrovascular disease, depression, senile dementia, schizophrenia, or learning disabilities; and also part of this study were their first-degree blood relatives. This study was the outgrowth of a long-term project on the practical application of computer methods for the evaluation of brain electrical activity related to anatomical integrity, maturational development, and sensory, perceptual;—and cognitive processes, especially in children. For many years, that project had been supported by the United Nations Development Program (UNDP), the National Scientific Research Center of Cuba (CNIC), and the Ministries of Public Health and of Education of Cuba. Since its inception, I had served as a technical advisor to the UNDP project. When the project began, I became acquainted with Dr. Jose M. Miyar Barrueco, who was at that time the Rector of the Medical School of the University of Havana. Because of his keen interest in the new computer technology and its potential utility in

developing countries, we met from time to time during my visits. These occasional meetings continued after he became Secretary of the Cuban Council of State, so that he could remain apprised of progress and problems with which he might help.

Secrets of the Mind Jul 04 2020 Written in a provocative, witty, and highly accessible style, this is not only a splendid general introduction to the central questions of consciousness and brain science, but also an answer to some of them. The author -- noted Glaswegian chemist A.G. Cairns-Smith -- believes our feelings and sensations are not simply alternative descriptions of neural events but have themselves evolved and have physical effects in the brain as well as physical causes. *Secrets of the Mind* portrays a vision of the world as it may come to be seen by a future science. Sand, sea water, air, and the atoms from which such materials are made are now well understood by science, but the same can not be said of our personal feelings, our sensations and emotions. Science tells us that these too must be forms of quantum energy if they evolved, yet is only now beginning to explain how.

Naming the Mind Jun 26 2022 Intelligence, motivation, personality, learning, stimulation, behaviour and attitude are just some of the categories that map the terrain of 'psychological reality'. These are the concepts which, among others, underpin theoretical and empirical work in modern psychology - and yet these concepts have only recently taken on their contemporary meanings. This fascinating work is a persuasive explanation of how modern psychology found its language. Kurt Danziger develops an account that goes beyond the taken-for-granted quality of psychological discourse to offer a profound and broad-ranging analysis of the recent evolution of the concepts and categories on which it depends. Danziger explores this process and shows how its conse

How to Change Your Mind Oct 31 2022 Now on Netflix as a 4-part documentary series! "Pollan keeps you turning the pages . . . cleareyed and assured." —New York Times A #1 New York Times Bestseller, New York Times Book Review 10 Best Books of 2018, and New York Times Notable Book A brilliant and brave investigation into the medical and scientific revolution taking place around psychedelic drugs--and the spellbinding story of his own life-changing psychedelic experiences When Michael Pollan set out to research how LSD and psilocybin (the active ingredient in magic mushrooms) are being used to provide relief to people suffering from difficult-to-treat conditions such as depression, addiction and anxiety, he did not intend to write what is undoubtedly his most personal book. But upon discovering how these remarkable substances are improving the lives not only of the mentally ill but also of healthy people coming to grips with the challenges of everyday life, he decided to explore the landscape of the mind in the first person as well as the third. Thus began a singular adventure into various altered states of consciousness, along with a dive deep into both the latest brain science and the thriving underground community of psychedelic therapists. Pollan sifts the historical record to separate the truth about these mysterious drugs from the myths that have surrounded them since the 1960s, when a handful of psychedelic evangelists inadvertently catalyzed a powerful backlash against what was then a promising field of research. A unique and elegant blend of science, memoir, travel writing, history, and medicine, *How to Change Your Mind* is a triumph of participatory journalism. By turns dazzling and edifying, it is the gripping account of a journey to an exciting and unexpected new frontier in our understanding of the mind, the self, and our place in the world. The true subject of Pollan's "mental travelogue" is not just psychedelic drugs but also the eternal puzzle of human consciousness and how, in a world that offers us both suffering and joy, we can do our best to be fully present and find meaning in our lives.

The Secret World of Sleep Aug 05 2020 In recent years neuroscientists have uncovered the countless ways our brain trips us up in day-to-day life, from its propensity toward irrational thought to how our intuitions deceive us. The latest research on sleep, however, points in the opposite direction. Where old wives tales have long advised to "sleep on a problem," today scientists are discovering the truth behind these folk

sayings, and how the busy brain radically improves our minds through sleep and dreams. In *The Secret World of Sleep*, neuroscientist Penny Lewis explores the latest research into the nighttime brain to understand the real benefits of sleep. She shows how, while our body rests, the brain practices tasks it learned during the day, replays traumatic events to mollify them, and forges connections between distant concepts. By understanding the roles that the nocturnal brain plays in our waking life, we can improve the relationship between the two, and even boost creativity and become smarter. This is a fascinating exploration of one of the most surprising corners of neuroscience that shows how science may be able to harness the power of sleep to improve learning, health, and more.

The Mind And Its Education Aug 29 2022 This Book Is A Study Of Mind And Its Education. It Is Easy To Understand How We May Investigate The Great World Of Material Things About Us; For We Can See It, Touch It, Weight It, Or Measure It. But How Are We To Discover The Nature Of Mind Or Come To Know The Processes By Which Consciousness Works? For Mind Is Intangible, We Can Not See It, Feel It Or Hand It. Mind Belongs Not To The Realm Of Matter Which Is Known To The Senses, But To The Realm Of Spirit, Which The Senses Can Never Grasp. And Yet The Mind Can Be Known And Studied As Truly And As Scientifically As Can The World Of Matter. The Subject Matter Of This Book Is Made Concrete And Practical By The Use Of Several Illustrations And Through Application To Real Problems. The Style Has Been Kept Easy And Familiar To Facilitate The Reading And Hope That The Book Would Be Of Interest And Value To Students Of All Ages And To The General Public As Well. Contents Chapter 1: The Mind Or Consciousness; How The Mind Is To Be Known: Personal Character Of Consciousness, Introspection The Only Means Of Discovering Nature Of Consciousness, How We Introspect, Studying Mental States Of Others Through Expression, Learning To Interpret Expression, The Nature Of Consciousness: Innateness Of The Mind Not Revealed By Introspection, Consciousness As A Process Or Stream, Consciousness Likened To A Field, The Piling Up Of Consciousness Is Attention; Content Of The Mental Stream: Why We Need Minds, Content Of Consciousness Determined By Function, Three Fundamental Phases Of Consciousness, Where Consciousness Resides: Consciousness Works Through The Nervous System, Problems In Observation And Introspection; Chapter 2: Attention; Nature Of Attention: The Nature Of Attention, Normal Consciousness Always In A State Of Attention, The Effects Of Attention: Attention Makes Its Object Clear And Definite, Attention Measures Mental Efficiency, How We Attend: Attention A Relating Activity, The Rhythms Of Attention, Points Of Failure In Attention: Lack Of Concentration, Mental Wandering, Types Of Attention: The Three Types Of Attention, Interest And Non-Voluntary Attention, The Will And Voluntary Attention, Not Really Different Kinds Of Attention, Improving The Power Of Attention, Making Different Kinds Of Attention Reinforce Each Other, The Habit Of Attention, Problems In Observation And Introspection; Chapter 3: The Brain And Nervous System; The Relation Of Mind And Brain: Interaction Of Mind And Brain, The Brain As The Mind's Machine, The Mind's Dependence On The External World: The Mind At Birth, The Work Of The Senses, Structural Elements Of The Nervous System: The Neuron, Neuron Fibers, Neuralgia, Complexity Of The Brain, Gray And White Matter, Gross Structure Of The Nervous System: Divisions Of The Nervous System, The Central System, The Cerebellum, The Cerebrum, The Cortex, The Spinal Cord, Localization Of Function In The Nervous System: Division Of Labor, Division Of Labor In The Cortex, Forms Of Sensory Stimuli: The End-Organs And Their Response To Stimuli, Dependence Of The Mind On The Senses; Chapter 4: Mental Development And Motor Training; Factors Determining The Efficiency Of The Nervous System: Development And Nutrition, Undeveloped Cells, Development Of Nerve Fibers, Development Of Nervous System Through Use: Importance Of Stimulus And Response, Effect Of Sensory Stimuli, Necessity For Motor Activity, Development Of The Association Centers, The Factors Involved In A Simple Action, Education And The Training Of The Nervous System: Education To Supply Opportunities For Stimulus And Response, Order Of Development In The Nervous System, Importance Of Health And Vigor Of The Nervous System: The Influence Of Fatigue, The Effects Of Worry, The Factors In Good Nutrition, Problems For Introspection And Observation; Chapter 5: Habit; The Nature Of Habit: The Physical Basis Of Habit, All Living Tissue Plastic, Habit A Modification Of Brain Tissue, We Must Form Habits, The Place Of Habit In The Economy Of Our Lives: Habit Increases Skill And Efficiency, Habit Saves Efforts And Fatigue, Habit Economizes Moral Effort, The Habit Of Attention, Habit Enables Us To

As Michio Kaku reveals, not only are they possible, but with the latest advances in brain science and recent astonishing breakthroughs in technology, they already exist. In *The Future of the Mind*, the New York Times bestselling author takes us on a stunning, provocative and exhilarating tour of the top laboratories around the world to meet the scientists who are already revolutionising the way we think about the brain - and ourselves.

Shadows of the Mind Feb 03 2023 *Shadows of the Mind* is a profound exploration of what modern physics has to tell us about the mind, and a visionary description of what a new physics - one that is adequate to account for our extraordinary brain - might look like. It is also a bold speculation

The Mind-Body Problem Apr 05 2023 An introduction to the mind-body problem, covering all the proposed solutions and offering a powerful new one. Philosophers from Descartes to Kripke have struggled with the glittering prize of modern and contemporary philosophy: the mind-body problem. The brain is physical. If the mind is physical, we cannot see how. If we cannot see how the mind is physical, we cannot see how it can interact with the body. And if the mind is not physical, it cannot interact with the body. Or so it seems. In this book the philosopher Jonathan Westphal examines the mind-body problem in detail, laying out the reasoning behind the solutions that have been offered in the past and presenting his own proposal. The sharp focus on the mind-body problem, a problem that is not about the self, or consciousness, or the soul, or anything other than the mind and the body, helps clarify both problem and solutions. Westphal outlines the history of the mind-body problem, beginning with Descartes. He describes mind-body dualism, which claims that the mind and the body are two different and separate things, nonphysical and physical, and he also examines physicalist theories of mind; antimaterialism, which proposes limits to physicalism and introduces the idea of qualia; and scientific theories of consciousness. Finally, Westphal examines the largely forgotten neutral monist theories of mind and body, held by Ernst Mach, William James, and Bertrand Russell, which attempt neither to extract mind from matter nor to dissolve matter into mind. Westphal proposes his own version of neutral monism. This version is unique among neutral monist theories in offering an account of mind-body interaction.

Turning On the Mind Oct 19 2021 In 1951, the eight o'clock nightly news reported on Jean-Paul Sartre for the first time. By the end of the twentieth century, more than 3,500 programs dealing with philosophy and its practitioners—including Bachelard, Badiou, Foucault, Lyotard, and Lévy—had aired on French television. According to Tamara Chaplin, this enduring commitment to bringing the most abstract and least visual of disciplines to the French public challenges our very assumptions about the incompatibility of elite culture and mass media. Indeed, it belies the conviction that television is inevitably anti-intellectual and the quintessential archenemy of the book. Chaplin argues that the history of the televising of philosophy is crucial to understanding the struggle over French national identity in the postwar period. Linking this history to decolonization, modernization, and globalization, *Turning On the Mind* claims that we can understand neither the markedly public role that philosophy came to play in French society during the late twentieth century nor the renewed interest in ethics and political philosophy in the early twenty-first unless we acknowledge the work of television. Throughout, Chaplin insists that we jettison presumptions about the anti-intellectual nature of the visual field, engages critical questions about the survival of national cultures in a globalizing world, and encourages us to rethink philosophy itself, ultimately asserting that the content of the discipline is indivisible from the new media forms in which it has found expression.

Languages of the Mind Jun 02 2020 Over the past two decades, Ray Jackendoff has persistently tackled difficult issues in the theory of mind and related theories of cognitive processing. Chief among his contributions is a formal theory that elaborates the nature of language and its relationship to a broad set of other domains. *Languages of the Mind* provides convenient access to Jackendoff's work over the past five years on the nature of mental representations in a variety of cognitive

domains, in the context of a detailed theory of the level of conceptual structure developed in his earlier books *Semantics and Cognition* and *Consciousness and the Computational Mind*. The first two chapters summarize the theory of levels of mental representation ("languages of the mind") and their relationships to each other and show how conceptual structure can be approached along lines familiar from syntactic and phonological theory. From this background, subsequent chapters develop issues in word learning (and its pertinence to the Piaget-Chomsky debate) and the relation of conceptual structure to the understanding of physical space. Further chapters apply the theory to domains outside of traditional cognitive science. They include an approach to social and cultural cognition modeled on first principles of linguistic theory, the beginnings of a formal description of psychodynamic phenomena, and a discussion of musical parsing and its relation to musical affect that bears on current disputes in linguistic parsing. The final chapter takes up a long-standing conflict between philosophical and psychological approaches to the study of mind, arguing that mental representations should be regarded purely in terms of the combinatorial organization of brain states, and that the philosophical insistence on the intentionality of mental states should be abandoned.

Dichotomies of the Mind Apr 24 2022 Offers an original conceptual model of the functioning of the brain and mind to help explain and understand human behavioral patterns. Draws on Jungian psychology, miscellaneous theories of the mind, and principles of information theory and systems engineering. Written in the language of mathematics, computers, and psychology to construct a model of the organization underlying intelligence.

On the Lyricism of the Mind Feb 29 2020 *On the Lyricism of the Mind: Psychoanalysis and Literature* explores the lyrical dimension (or the lyricism) of the psychic space. It is not presented as an artistic disposition, but rather as a universal psychic quality which enables the recovery and recuperation of the self. The specific nature of human lyricism is defined as the interaction as well as the integration of two psychic modes of experience originally defined by the psychoanalyst Wilfred Bion: The emergent and the continuous principles of the self. Dana Amir elaborates Bion's general notion of an interaction between the emergent and the continuous principles of the self, offering a discussion of the specific function of each principle and of the significance of the various types of interaction between them as the basis for mental health or pathology. The author applies these theoretical notions in her analytic work by means of literary illustrations showing how the lyrical dimension may be used to teach psychoanalytic readings of literature and explore the connection between psychoanalytic and literary languages. *On the Lyricism of the Mind* presents a new psychoanalytic understanding of the capacity to heal, to grieve, to love and to know, using literary illustrations but also literary language in order to extract a new formulation out of the classic psychoanalytic language of Winnicott and Bion. This book will appear to a wide audience to include psychoanalysts, psychotherapists and art therapists. It is also extremely relevant to literary scholars, including students of literary criticism, philosophers of language and philosophers of mind, novelists, poets, and to the wide educated readership in general.

The Inflamed Mind Jan 10 2021 Depression will be the single biggest cause of disability worldwide, in the next 20 years. But treatment for it has not changed much in the last three decades. In the realm of psychiatry, time has apparently stood still... until now. In this game-changing book, Professor Edward Bullmore reveals the breakthrough new science on the link between mental depression and physical inflammation. He explains how and why mental disorders can have their roots in the immune system and explores a whole new way of looking at how mind, brain and body all work together in a sometimes misguided effort to help us survive in a hostile world.

Mind and the Cosmic Order Dec 21 2021 The topic of this book is the relationship between mind and the physical world. From once being an esoteric question of philosophy, this subject has become a central topic in the foundations of quantum physics. The book traces this story back to Descartes, through Kant, to the beginnings of 20th Century physics, where it becomes clear that the mind-world relationship is not a

speculative question but has a direct impact on the understanding of physical phenomena. The book's argument begins with the British empiricists who raised our awareness of the fact that we have no direct contact with physical reality, but it is the mind that constructs the form and features of objects. It is shown that modern cognitive science brings this insight a step further by suggesting that shape and structure are not internal to objects, but arise in the observer. The author goes yet further by arguing that the meaningful connectedness between things — the hierarchical organization of all we perceive — is the result of the Gestalt nature of perception and thought, and exists only as a property of mind. These insights give the first glimmerings of a new way of seeing the cosmos: not as a mineral wasteland but a place inhabited by creatures.

Vision and Mind Jan 22 2022 The philosophy of perception is a microcosm of the metaphysics of mind. Its central problems—What is perception? What is the nature of perceptual consciousness? How can one fit an account of perceptual experience into a broader account of the nature of the mind and the world?—are at the heart of metaphysics. Rather than try to cover all of the many strands in the philosophy of perception, this book focuses on a particular orthodoxy about the nature of visual perception. The central problem for visual science has been to explain how the brain bridges the gap between what is given to the visual system and what is actually experienced by the perceiver. The orthodox view of perception is that it is a process whereby the brain, or a dedicated subsystem of the brain, builds up representations of relevant figures of the environment on the basis of information encoded by the sensory receptors. Most adherents of the orthodox view also believe that for every conscious perceptual state of the subject, there is a particular set of neurons whose activities are sufficient for the occurrence of that state. Some of the essays in this book defend the orthodoxy; most criticize it; and some propose alternatives to it. Many of the essays are classics. Contributors G.E.M. Anscombe, Dana Ballard, Daniel Dennett, Fred Dretske, Jerry Fodor, H.P. Grice, David Marr, Maurice Merleau-Ponty, Zenon Pylyshyn, Paul Snowdon, and P.F. Strawson

Battlefield of the Mind Dec 29 2019 !--StartFragment-- In her most popular bestseller ever, the beloved author and minister Joyce Meyer shows readers how to change their lives by changing their minds. Observations on the Growth of the Mind; with Remarks on Some Other Subjects Mar 12 2021 This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1838 edition. Excerpt: ... OBSERVATIONS ON THE GROWTH OF THE MIND. Nothing is a more common subject of remark than the changed condition of the world. There is a more extensive intercourse of thought, and a more powerful action of mind upon mind, than formerly. The good and the wise of all nations are brought nearer together, and begin to exert a power, which, though yet feeble as infancy, is felt throughout the globe. Public opinion, that helm which directs the progress of events by which the world is guided to its ultimate destination, has received a new direction. The mind has attained an upward and onward look, and is shaking off the errors and prejudices of the past. The structure of the feudal ages, the ornament of the desert, has been exposed to the light of heaven; and continues to be gazed at for its ugliness, as it ceases to be admired for its antiquity. The world is deriving vigor, not from that which is gone by, but from that which is coming; not from the unhealthy moisture of the evening, but from the nameless influences of the morning. The loud call on the past to instruct us, as it falls on the rock of ages, comes back in echo from the future. Both mankind, and the laws and principles by which they are governed,

seem about to be redeemed from slavery. The moral and intellectual character of man has undergone, and is undergoing, a change; and as this is effected, it must change the aspect of all things, as when the position-point is altered from which a landscape is viewed. We appear to be approaching an age which will be the silent pause of merely physical force before the powers of the mind; the timid, subdued, awed condition of the brute, gazing on the erect and godlike form of man. These remarks with respect to the present era are believed to be...

The Rediscovery of the Mind Mar 04 2023 In this major new work, John Searle launches a formidable attack on current orthodoxies in the philosophy of mind. More than anything else, he argues, it is the neglect of consciousness that results in so much barrenness and sterility in psychology, the philosophy of mind, and cognitive science: there can be no study of mind that leaves out consciousness. What is going on in the brain is neurophysiological processes and consciousness and nothing more—no rule following, no mental information processing or mental models, no language of thought, and no universal grammar. Mental events are themselves features of the brain, "like liquidity is a feature of water." Beginning with a spirited discussion of what's wrong with the philosophy of mind, Searle characterizes and refutes the philosophical tradition of materialism. But he does not embrace dualism. All these "isms" are mistaken, he insists. Once you start counting types of substance you are on the wrong track, whether you stop at one or two. In four chapters that constitute the heart of his argument, Searle elaborates a theory of consciousness and its relation to our overall scientific world view and to unconscious mental phenomena. He concludes with a criticism of cognitive science and a proposal for an approach to studying the mind that emphasizes the centrality of consciousness to any account of mental functioning. In his characteristically direct style, punctuated with persuasive examples, Searle identifies the very terminology of the field as the main source of truth. He observes that it is a mistake to suppose that the ontology of the mental is objective and to suppose that the methodology of a science of the mind must concern itself only with objectively observable behavior; that it is also a mistake to suppose that we know of the existence of mental phenomena in others only by observing their behavior; that behavior or causal relations to behavior are not essential to the existence of mental phenomena; and that it is inconsistent with what we know about the universe and our place in it to suppose that everything is knowable by us.

[Talmud on the Mind](#) Sep 17 2021 Where do we turn to better understand ourselves? For many people, the insights of modern psychology provide a way to be in touch with the inner-workings of their minds. However, for those familiar with traditional Jewish literature, the penetrating psychological insight of the Talmudic Sages provides a framework for spiritual and personal growth through profound self-understanding. In this volume, Ethan Eisen, a Yeshiva University-ordained rabbi and clinical psychologist, explores the seeds of contemporary psychology that are woven through the pages of the Talmud and its commentators. Based on passages from Maseches Berachos, Rabbi Dr. Eisen takes the reader on an illuminating journey through many topics-procrastination, bullying, mindfulness, and microaggressions, among many others-bringing traditional Jewish sources side by side with findings of modern

psychology. He concludes each chapter with a life-enhancing practical lesson that emerges from these two mutually enriching sources of knowledge and wisdom.

Putting on the Mind of Christ May 06 2023 Putting on the Mind of Christ is the ardent expression of a modern mystic reporting his spiritual experiences with a "Christ-focused" framework.

Rules of the Mind Jul 16 2021 Related to the earlier well-known ACT production system theory, this book's basic goal is to present evidence for the psychological reality of a production system model of mind. Distinguished from the original theory in three ways, this volume uses the rational analyses of Anderson (1990) to improve upon that theory and extend its scope. It also relates the theory to a great deal of new data on the performance and acquisition of cognitive skills. The new theory -- ACT-R -- involves a neurally plausible implementation of a production system architecture. Rational analysis is used to structure and parameterize the system to yield optimal information processing. The theory is applicable to a wide variety of research disciplines, including memory, problem solving, and skill acquisition. Using intelligent tutors, much of the data is concerned with the acquisition of cognitive skills. The book provides analyses of data sets describing the extended course of the acquisition of mathematical and computer programming skills.

The Psychoanalytic Model of the Mind Jan 02 2023 Written for students at every level of training, including psychiatry residents, psychology graduate students, social work students, and medical students, The Psychoanalytic Model of the Mind explains how the psychoanalytic model works and how it contributes to the care of people with mental illness. The book is founded on the psychoanalytic thinking that evolved over the last 120 years and surveys how the psychoanalytic model has become the basis for almost all psychological treatments, or "talking cures," for emotional suffering. In plain and accessible language, the author outlines the history of psychoanalysis, answers basic questions, defines the core dimensions of psychodynamic models, and illustrates their clinical utility. The Psychoanalytic Model of the Mind explores the most complex model of mental functioning ever formulated for clinical purposes and demonstrates that this model is useful in treating all patients, all of the time.
