After the IPS2 conferences in Cranfield and Linköping in 2009 and 2010 the 3rd CIRP International Conference on Industrial Product Service Systems (IPS2) 2011 takes place in Braunschweig, Germany. IPS2 itself is defined as “an integrated industrial product and service offering that delivers value in use”. The customers expect comprehensive solutions, which are adapted to their individual needs. IPS2 offers the possibility to stand out from competition and for long-term customer loyalty. Particularly in times of economic crisis it becomes apparent which producing

companies understand to satisfy the needs and requirements of their customers. Especially in this relatively new domain IPS2 it will be important to keep track of the whole context and to seek cooperation with other research fields and disciplines. The 3rd CIRP International Conference on Industrial Product Service Systems (IPS2) 2011 serves as a platform for such collaborations and the discussion of new scientific ideas.

Designed for students who may not have ready access to a law library, and for students on part-time and distance learning courses, the Sourcebook series offers a collection of material from a diversity of sources. A practical understanding of the law is essential for all those involved in the manual handling of adults and children (as patients, clients or pupils), whether in 'hands-on', managing, commissioning or advisory roles. To this end, *Manual Handling in Health and Social Care* presents an accessible overview of manual handling legislation, legal case law, national guidance, policy and practice. Applicable primarily to England, Scotland and Wales, it covers both employee safety under the Manual Handling Operations Regulations and wider health and safety at work legislation, and also patient and client entitlement under community care, NHS and human rights legislation. A stand-alone overview of manual handling law and practice is followed by more in-depth material, in A-Z format and fully cross-referenced, which allows the reader to look up issues for quick access to further information. In particular, it contains an extensive collection of case law relevant to health and social care and digested in summary form. Topics include rehabilitation, risk assessment, care plans, equipment provision, documentation of decisions and cumulative strain injury. Addressing the tensions sometimes existing between the health and safety of employees, the needs and wishes of service users and limited resources, this book provides professionals, managers, front-line staff and legal advisers with an understanding of law as a useful and practical tool to assist in solutions to manual handling problems. *Specialty Steels and Hard Materials* covers the proceedings of the International Conference on Recent Developments in Specialty Steels and Hard Materials (Materials Development '82). The main focus of the materials in the selection is on the microstructural detail,

alloy design, processing technology, applications, and economic viability. The first part of the title presents the invited papers in the conference; this part includes topics such as toughness in high speed steels and hard metals; the use of vanadium in low alloy structural steels; and design of strong, ductile, duplex low alloy steels. The second part of the text covers topics about high strength low alloy steels, stainless steels, and rapid solidification processing. The last part of selection deals with tungsten carbide-cobalt hard metals, non-oxide ceramics, and sintered polycrystalline ultra-hard materials. The book will be of great interest to students, researchers, and practitioners of materials engineering and metallurgy. This book presents papers from the lectures of leading researchers given at the Ninth International School on Formal Methods for the Design of Computer, Communication and Software Systems, SFM 2009, which was devoted to formal methods for web services. Covers receipts and expenditures of appropriations and other funds. Awarded the Nobel Prize for Literature in 1969, Samuel Beckett's influence on 20th century fiction and drama is immeasurable. Published in conjunction with the RT (Radio Telef s ireann) Thomas Davis Lecture Series to mark the centenary of Beckett's birth, Samuel Beckett - 100 Years consists of thirteen essays by many of the foremost academics studying Beckett today. Literary luminaries such as John Banville and Anthony Cronin line up alongside philosophers Dermot Moran and Richard Kearney to delve into the psyche of the man responsible for classics such as Murphy, Krapp's Last Tape, and Waiting for Godot, while actors Barry McGovern and Rosemary Pountney describe what makes his works so theatrical. The book is a challenging and serious look at Beckett's work and its impact on literature today. This book contains chapters with the results of the research into the creep effect in different materials (ceramics, metallic materials, polymers, organic materials) and presents the method for using the assessment based on creep tests and numerical calculations to determine the actual lifetime. This subject has relevance as a significant development of new materials in which the creep effect is a decisive factor for their durability within the design service life have been observed in recent years. Therefore, there is a great demand for knowledge of the actual performance of materials during and beyond the design service life. The book aims to provide readers, including but not limited to MSc and PhD students as well as research personnel and engineers involved in operation of power equipment, with the comprehensive information on changes in

the performance of creep-resistant materials during service. The CHILTON 2010 ASIAN VOLUME I SERVICE MANUAL now includes even better graphics and expanded procedures! it mean to be an American? The United States defines itself by its legal freedoms; it cannot tell its citizens who to be. Nevertheless, where possible, it must separate citizen from alien. In so doing, it defines the desirable characteristics of its citizens in immigration policy, spelling out how many and, most importantly, what sorts of persons can enter the country with the option of becoming citizens. Over the past century, the U.S. Congress argued first that prospective citizens should be judged in terms of race, then in terms of politics, then of ideology, then of wealth and skills. Each argument arose in direct response to a perceived foreign threat--a threat that was, in the government's eyes, racial, political, ideological, or economic. *Immigration and the Politics of American Sovereignty* traces how and why public arguments about immigrants changed over time, how some arguments came to predominate and shape policy, and what impact these arguments have had on how the United States defines and defends its sovereignty. Cheryl Shanks offers readers an explanation for immigration policy that is more distinctly political than the usual economic and cultural ones. Her study, enriched by the insights of international relations theory, adds much to our understanding of the notion of sovereignty and as such will be of interest to scholars of international relations, American politics, sociology, and American history. Cheryl Shanks is Assistant Professor of Political Science, Williams College. This book explores fundamental scientific problems essential for autonomous cyber defense. Specific areas include: Game and control theory-based moving target defenses (MTDs) and adaptive cyber defenses (ACDs) for fully autonomous cyber operations; The extent to which

autonomous cyber systems can be designed and operated in a framework that is significantly different from the human-based systems we now operate; On-line learning algorithms, including deep recurrent networks and reinforcement learning, for the kinds of situation awareness and decisions that autonomous cyber systems will require; Human understanding and control of highly distributed autonomous cyber defenses; Quantitative performance metrics for the above so that autonomous cyber defensive agents can reason about the situation and appropriate responses as well as allowing humans to assess and improve the autonomous system. This book establishes scientific foundations for adaptive autonomous cyber systems and ultimately brings about a more secure and reliable Internet. The recent advances in adaptive cyber defense (ACD) have developed a range of new ACD techniques and methodologies for reasoning in an adaptive environment. Autonomy in physical and cyber systems promises to revolutionize cyber operations. The ability of autonomous systems to execute at scales, scopes, and tempos exceeding those of humans and human-controlled systems will introduce entirely new types of cyber defense strategies and tactics, especially in highly contested physical and cyber environments. The development and automation of cyber strategies that are responsive to autonomous adversaries pose basic new technical challenges for cyber-security. This book targets cyber-security professionals and researchers (industry, governments, and military). Advanced-level students in computer science and information systems will also find this book useful as a secondary textbook. The two-volume set of LNCS 6426/6427 constitutes the refereed proceedings of 3 confederated international conferences on CoopIS (Cooperative Information Systems), DOA (Distributed Objects and Applications) and ODBASE (Ontologies, DataBases and Applications of SEmanantics). These conferences were held in October 2009 in Greece, in Hersonissos on the island of Crete. CoopIS is covering the applications of technologies in an enterprise context as workflow systems and knowledge management. DOA is covering the relevant infrastructure-enabling technologies and finally, OSBASE is covering WEB semantics, XML databases and ontologies. The 83 revised full papers presented together with 3 keynote talks were carefully reviewed and selected from a total of 223 submissions. Corresponding to the OTM main conferences the papers are organized in topical sections on process models and management, modeling of cooperation, services computing, information processing and management, human-based

cooperative systems, ontology and workflow challenges, access control, authentication and policies, secure architectures, cryptography, data storage and processing, transaction and event management, virtualization performance, risk and scalability, cloud and distributed system security, reactivity and semantic data, ontology mapping and semantic similarity, domain specific ontologies.
