How to Build a Mind Mar 06 2021 The creator of Magnus - the world's first conscious laptop computer - looks at the science and philosophy behind the quest to build machines with minds of their own.

The Minds of Billy Milligan Jan 28 2023 'Fascinating' LA Times '[Keyes] has carried it off brilliantly, bringing not only a fine clarity but a special warmth and empathy' Washington Post NOW ON NETFLIX Billy Milligan was a man tormented by twenty-four distinct personalities battling for supremacy - a battle that culminated when he awoke in jail, arrested for the kidnap and rape of three women. In a landmark trial, Billy was acquitted of his crimes by reason of insanity caused by multiple personality disorder - the first such court decision in history. Among the twenty-four are: Philip, a petty criminal; Kevin, who dealt drugs; April, whose only ambition was to kill Billy's stepfather; Adalana, the shy, affection-starved lesbian who 'used' Billy's body in the rapes that led to his arrest; David, the eight-year-old 'keeper of the pain'; and the Teacher, the sum of all Billy's alter egos fused into one. In The Minds of Billy Milligan, Daniel Keyes brings to light the most remarkable and harrowing case of multiple personality ever recorded.

The Mind of the Mathematician Mar 25 2020 Publisher description

Other Minds: The Octopus and the Evolution of Intelligent Life Aug 23 2022 BBC R4 Book of the Week 'Brilliant' Guardian 'Fascinating and often delightful' The Times What if intelligent life on Earth evolved not once, but twice? The octopus is the closest we will come to meeting an intelligent alien. What can we learn from the encounter?

The Mind is Flat Dec 23 2019 A radical reinterpretation of how your mind works - and why it could change your life 'An astonishing achievement. Nick Chater has blown my mind' Tim Harford 'A total assault on all lingering psychiatric and psychoanalytic notions of mental depths ... Light the touchpaper and stand well back' New Statesman We all like to think we have a hidden inner life. Most of us assume that our beliefs and desires arise from the murky depths of our minds, and, if only we could work out how to access this mysterious world, we could truly understand ourselves. For more than a century, psychologists and psychiatrists have struggled to discover what lies below our mental surface. In The Mind Is Flat, pre-eminent behavioural scientist Nick Chater reveals that this entire enterprise is utterly misguided. Drawing on startling new research in neuroscience, behavioural psychology and perception, he shows that we have no hidden depths to plumb, and unconscious thought is a myth. Instead, we generate our ideas, motives and thoughts in the moment. This revelation explains many of the quirks of human behaviour - for example why our supposedly firm political beliefs, personal preferences and even our romantic attractions are routinely proven to be inconsistent and changeable. As the reader discovers, through mind-bending visual examples and counterintuitive experiments, we are all characters of our own creation, constantly improvising our behaviour based on our past experiences. And, as Chater shows us, recognising this can be liberating.

Winning the Battle for the Minds of Men Jul 30 2020 Christianity once turned the world upside down, but today it is considered irrelevant. In this book Dennis Peacocke provides us with the answers. He exposes the lies that are crippling the church and reveals how we can recapture the Church's original vision and power for discipling all nations.

The Book of Minds Apr 30 2023 Popular science writer Philip Ball explores a range of sciences to map our answers to a huge, philosophically rich question: How do we even begin to think about minds that are not human? Sciences from zoology to astrobiology, computer science to neuroscience, are seeking to understand minds in their own distinct disciplinary realms. Taking a uniquely broad view of minds and where to find them—including in plants, aliens, and God—Philip Ball pulls the pieces together to explore what sorts of minds we might expect to find in the universe. In so doing, he offers for the first time a unified way of thinking about what minds are and what they can do, by locating them in what he calls the “space of possible minds.” By identifying and mapping out properties of mind without prioritizing the human, Ball sheds new light on a host of fascinating questions: What moral rights should we afford animals, and can we understand their thoughts? Should we worry that AI is going to take over society? If there are intelligent aliens out there, how could we communicate with them? Should we? Understanding the space of possible minds also reveals ways of making advances in understanding some of the most challenging questions in contemporary science: What is thought? What is consciousness? And what (if anything) is free will? Informed by conversations with leading researchers, Ball’s brilliant survey of current views about the nature and existence of minds is more mind-expanding than we could imagine. In this fascinating panorama of other minds, we come to better know our own.

Closing of the American Mind May 27 2020 The brilliant, controversial, bestselling critique of American culture that “hits with the approximate force and effect of electroshock therapy” (The New York Times)—now featuring a new afterword by Andrew Ferguson in a twenty-fifth anniversary edition. In 1987, eminent political philosopher Allan Bloom published *The Closing of the American Mind*, an appraisal of contemporary America that “hits with the approximate force and effect of electroshock therapy” (The New York Times) and has not only been vindicated, but has also become more urgent today. In clear, spirited prose, Bloom argues that the social and political crises of contemporary America are part of a larger intellectual crisis: the result of a dangerous narrowing of curiosity and exploration by the university elites. Now, in this twenty-fifth anniversary edition, acclaimed author and journalist Andrew Ferguson contributes a new essay that describes why Bloom’s argument caused such a furor at publication and why our culture so deeply resists its truths today.

Minds Of Their Own Dec 15 2021 Do Animals have ideas? Do they experience pain like humans? Do they think about objects that they cannot see? About situations that have occurred in the past? Do they consciously make plans for the future or do they simply react unthinkingly to objects as they appear and situations as they arise? All of these questions have bearing on whether or not animals have consciousness. The advent of computers that 'think' has lead us to consider 'intelligence' in a way we never thought possible a decade ago. But when and how does information processing in the brain become automatic?In *Minds of Their Own*, Lesley J. Rogers examines the issue of animal thought both sympathetically and critically by looking at the different behavior characteristics of a variety of animals, the evolution of the brain and when consciousness might have evolved. To most people, to be conscious means to be aware of oneself as well as to be aware of others. But does this hold true for animals? The answer may have implications which transcend mere scientific inquiry: if animals are cognizant creatures, what, if any, moral responsibility do humans have to assure their rights? This timely book examines this issue and others by emphasizing comparisons between humans and animals: how we evolved; how we remember; how we learn.

Shadows of the Mind May 08 2021 *Shadows of the Mind* is a profound exploration of what modern physics has to tell us about the mind, and a visionary description of what a new physics - one that is adequate to account for our extraordinary brain - might look like. It is also a bold specul

Fire in the Minds of Men Feb 26 2023 This book traces the origins of a faith—perhaps the faith of the century. Modern revolutionaries are believers, no less committed and intense than were Christians or Muslims of an earlier era. What is new is the belief that a perfect secular order will emerge from forcible overthrow of traditional authority. This inherently implausible idea energized Europe in the nineteenth century, and became the most pronounced ideological export of the West to the rest of the world in the twentieth century. Billington is interested in revolutionaries--the innovative creators of a new tradition. His historical frame extends from the waning of the French Revolution in the late eighteenth century to the beginnings of the Russian Revolution in the early twentieth century. The theater was Europe of the industrial era; the main stage was the journalistic offices within great cities such as Paris, Berlin, London, and St. Petersburg. Billington claims with considerable evidence that revolutionary ideologies were shaped as much by the occultism and proto-romanticism of Germany as the critical rationalism of the French Enlightenment. The conversion of social theory to political practice was essentially the work of three Russian revolutions: in 1905, March 1917, and November 1917. Events in the outer rim of the European world brought discussions about revolution out of the school rooms and press rooms of Paris and Berlin into the halls of power. Despite his hard realism about the adverse practical consequences of revolutionary dogma, Billington appreciates the identity of its best sponsors, people who preached social justice transcending traditional national, ethnic, and gender boundaries. When this book originally appeared *The New Republic* hailed it as "remarkable, learned and lively," while *The New Yorker* noted that Billington "pays great attention to the lives and emotions of individuals and this makes his book absorbing." It is an invaluable work of history and contribution to our understanding of political life.

The Minds of Birds Feb 14 2022 His intimate, six-decade study of tropical and north temperate birds and his wide survey of the literature inform this remarkable review of the psychic life of birds.

The Minds of the Moderns Dec 27 2022 This is a comprehensive examination of the ideas of the early modern philosophers on the nature of mind. Taking Descartes, Spinoza, Leibniz, Locke, Berkeley, and Hume in turn, Janice Thomas presents an authoritative and critical assessment of each of these canonical thinkers' views of the notion of mind. The book examines each philosopher's position on five key topics: the metaphysical character of minds and mental states; the nature and scope of introspection and self-knowledge; the nature of consciousness; the problem of mental causation and the nature of representation and intentionality. The exposition and examination of their positions is informed by present-day debates in the philosophy of mind and the philosophy of psychology so that students get a clear sense of the importance of these philosophers' ideas, many of which continue to define our current notions of the mental.Again and again, philosophers and students alike come back to the great early modern rationalist and empiricist philosophers for instruction and inspiration. Their views on the philosophy of mind are no exception and as Janice Thomas shows they have much to offer contemporary debates. The book is suitable for undergraduate courses in the philosophy of mind and the many new courses in philosophy of psychology.

The Mind's I Aug 11 2021

How the Mind Works Oct 01 2020 An assessment of human thought and behavior explores conundrums from the mind's ability to perceive three dimensions to the nature of consciousness, in an account that draws on beliefs in cognitive science and evolutionary biology.

Smellosophy Jun 28 2020 A pioneering exploration of olfaction that upsets settled notions of how the brain translates sensory information. Decades of cognition research have shown that external stimuli “spark” neural patterns in particular regions of the brain. This has fostered a view of the brain as a space that we can map: here the brain responds to faces, there it perceives a sensation in your left hand. But it turns out that the sense of smell—only recently attracting broader attention in neuroscience—doesn’t work this way. A. S. Barwich asks a deceptively simple question: What does the nose tell the brain, and how does the brain understand it? Barwich interviews experts in neuroscience, psychology, chemistry, and perfumery in an effort to understand the biological mechanics and myriad meanings of odors. She argues that it is time to stop recycling ideas based on the paradigm of vision for the olfactory system. Scents are often fickle and boundless in comparison with visual images, and they do not line up with well-defined neural regions. Although olfaction remains a puzzle, Barwich proposes that what we know suggests the brain acts not only like a map but also as a measuring device, one that senses and processes simple and complex odors. Accounting for the sense of smell upsets theories of perception philosophers have developed. In their place, Smellosophy articulates a new model for understanding how the brain represents sensory information.

Sybil Exposed Feb 02 2021 Journalist Debbie Nathan reveals the true story behind the famous case of Sybil, the woman with sixteen different personalities.

In the Minds of Men Oct 13 2021

A Mind of Its Own Sep 11 2021 ‘A fascinating, funny, disconcerting and lucid book.’ Helen Dunmore ‘Fine sets out to demonstrate that the human brain is vainglorious and stubborn. She succeeds brilliantly.’ Mail on Sunday ‘Fine is a cognitive neuroscientist with a sharp sense of humour and an intelligent sense of reality’ The Times Perhaps your brain seems to stumble when faced with the 13 times table, or persistently fails to master parallel parking. But you’re in control of it, right? Sorry. Think again. Dotted with popular explanations of social psychology research and fascinating real-life examples, *A Mind of Its Own* tours the less salubrious side of human psychology. Psychologist Cordelia Fine shows that the human brain is in fact stubborn, emotional and deceitful, and teaches you everything you always wanted to know about the brain – and plenty you probably didn’t.

The Life of the Mind Feb 23 2020

The Mind of the Book Jun 20 2022 Alastair Fowler presents a fascinating study of title pages printed in England from the early modern era to the nineteenth century, exploring their place in the History of the Book for the first time. He illuminates key features of title-page design and presents 16 illustrations of significant title-pages with commentaries, from Chaucer to Dickens.

The Minds of the West Jul 22 2022 In the century preceding World War I, the American Middle West drew thousands of migrants both from Europe and from the northeastern United States. In the American mind, the region represented a place where social differences could be muted and a distinctly American culture created. Many of the European groups, however, viewed the Midwest as an area of opportunity because it allowed them to retain cultural and religious traditions from their homelands. Jon Gjerde examines the cultural patterns, or "minds," that those settling the Middle West carried with them. He argues that such cultural transplantation could occur because patterns of migration tended to reunite people of similar pasts and because the rural Midwest was a vast region where cultural groups could sequester themselves in tight-knit settlements built around familial and community institutions. Gjerde compares patterns of development and acculturation across immigrant groups, exploring the frictions and fissures experienced within and between communities. Finally, he examines the means by which individual ethnic groups built themselves a representative voice, joining the political and social debate on both a regional and national level.

A Subtle Enigma Apr 18 2022

Examples of Questions, Calculated to Excite and Exercise the Minds of the Young (Classic Reprint) Apr 06 2021 Excerpt from Examples of Questions, Calculated to Excite and Exercise the Minds of the Young The name of Elizabeth Hamilton is associated with much that is sound and practical in the science and art of Early Education. Those who have read her former works on this subject, particularly her "Elementary Principles," will be disposed to receive with favor this little treatise, which is now, for the first time, it is believed, reprinted in this country. Though a distinct work, and complete in itself, it was originally appended to an admirable Essay by Mrs. Hamilton, entitled "Hints addressed to the Patrons and Directors of Schools." The Editor avails himself of this in offering a few remarks intended to illustrate the author's design more fully than is done in the Introduction which follows. The "Questions" now republished arc founded on the principles which Pestalozzi adopted, with well known success, in every part of education. To him belongs the high praise of having followed the indications of nature in the instruction of the young, instead of subjecting their minds to preconceived theories. He observed that the intellectual powers can only be developed gradually, and by a regular series of efforts; and that when a clear idea on any subject is acquired, the idea next in succession is easily imbibed. This idea, moreover, he believed, should not be directly imparted to the children, but should be obtained by their own mental efforts. Instead therefore of obliging his pupils to repeat by rote, words, that suggested ideas to his own mind, he first endeavored to ascertain the ideas that actually existed in theirs. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. Society Of Mind Sep 23 2022 Computing Methodologies -- Artificial Intelligence.

The Book of Minds Mar 30 2023 Understanding the human mind and how it relates to the world of experience has challenged scientists and philosophers for centuries. How do we even begin to think about ‘minds’ that are not human? That is the question explored in this ground-breaking book. Award-winning science writer Philip Ball argues that in order to understand our own minds and imagine those of others, we need to move on from considering the human mind as a standard against which all others should be measured. Science has begun to have something to say about the properties of mind; the more we learn about the minds of other creatures, from octopuses to chimpanzees, to imagine the potential minds of computers and alien intelligences, the more we can begin to see our own, and the more we can understand the diversity of the human mind, in the widest of contexts. By understanding how minds differ, we can also best understand our own.

Journey of the Mind: How Thinking Emerged from Chaos Jan 16 2022 Two neuroscientists reveal why consciousness exists and how it works by examining eighteen increasingly intelligent minds, from microbes to humankind—and beyond. Why do you exist? How did atoms and molecules transform into sentient creatures that experience longing, regret, compassion, and even marvel at their own existence? What does it truly mean to have a mind—to think? Science has offered few answers to these existential questions until now. Journey of the Mind is the first book to offer a unified account of the mind that explains how consciousness, language, self-awareness, and civilization arose incrementally out of chaos. The journey begins three billion years ago with the emergence of the universe’s simplest possible mind. From there, the book explores the nanoscopic archaean, whose thinking machinery consists of a handful of molecules, then advances through amoebas, worms, frogs, birds, monkeys, and humans, explaining what each “new” mind could do that previous minds could not. Though they admire the triumph of human consciousness, Ogi Ogas and Sai Gaddam argue that humans are hardly the most sophisticated minds on the planet. The same physical principles that produce human self-awareness are leading cities and nation-states to develop “superminds,” and perhaps planting the seeds for even higher forms of consciousness. Written in lively, accessible language accompanied by vivid illustrations, Journey of the Mind is a mind-bending work of popular science, the first general book to share the cutting-edge mathematical basis for consciousness, language, and the self. It shows how a “unified theory of the mind” can explain the mind’s greatest mysteries—and offer clues about the ultimate fate of all minds in the universe.

How Minds Change Aug 30 2020 ‘In a time when too many minds seem closed, this is a masterful analysis of what it takes to open them’ Adam Grant, author of the bestselling Think Again ‘Optimistic, illuminating and even inspiring’ Guardian As the world is increasingly polarised, it feels impossible to change the mind of someone with a conflicting view. But this book shows that you could be one conversation away from changing someone’s mind about something, maybe a lot of things. Self-delusion expert and psychology nerd David McRaney sets out to discover not just what it takes to influence others, but why we believe in the first place. Along the way he meets a former Westboro Baptist Church member who was deradicalised on Twitter, goes deep canvassing to see how quickly people will surrender their character-defining views, finds a 9/11 Truther who turns his back on it all, and reveals how, within a few years, half a country can go from opposing the ‘gay agenda’ to happily attending same-sex weddings. Distilling the latest research in psychology and neuroscience, How Minds Change reveals how beliefs take hold, not over hundreds of years, but in less than a generation, in less than a decade, and sometimes in an instant.

The Mind of Man Jun 08 2021

Inside the Minds of Men Jul 10 2021 Inside the Minds of Men (Written for Women Confirmed by Men) is a book that answers many questions about men that often times go unanswered while in a relationship with his woman. This book makes for a great reference guide for women in search of a better understanding of men, how to spot a good one, and how to keep him!

Poisoning the Minds of the Lower Orders Mar 18 2022 Conservatism was born as an anguished attack on democracy. So argues Don Herzog in this arrestingly detailed exploration of England’s responses to the French Revolution. Poisoning the Minds of the Lower Orders ushers the reader into the politically lurid world of Regency England. Deftly weaving social and intellectual history, Herzog brings to life the social practices of the Enlightenment. In circulating libraries and Sunday schools, deferential subjects developed an avid taste for reading; in coffeehouses, alehouses, and debating societies, they boldly dared to argue about politics. Such conservatives as Edmund Burke gaped with horror, fearing that what radicals applauded as the rise of rationality was really popular stupidity or worse. Subjects, insisted conservatives, ought to defer to tradition--and be comforted by illusions. Urging that abstract political theories are manifest in everyday life, Herzog unflinchingly explores the unsavory emotions that maintained and threatened social hierarchy. Conservatives dished out an unrelenting diet of contempt. But Herzog refuses to pretend that the day’s radicals were saints. Radicals, he shows, invested in contempt as enthusiastically as did conservatives. Hairdressers became newly contemptible, even a cultural obsession. Women, workers, Jews, and blacks were all abused by their presumed superiors. Yet some of the lowly subjects Burke had the temerity to brand a swinish multitude fought back. How were England’s humble subjects transformed into proud citizens? And just how successful was the transformation? At once history and political theory, absorbing and disquieting, Poisoning the Minds of the Lower Orders challenges our own commitments to and anxieties about democracy.

The Mind of the Leader Nov 13 2021 Most leaders think they’re effective at motivating their employees, but studies show that employees are more disengaged and uninspired than ever. The solution lies in looking within-- into the mind of the leader. Hougard and Carter identify three qualities as being foundational for leaders today: mindfulness, selflessness, and compassion. Discover how every leader can learn to embody what makes for great leadership in today’s challenging organizational environment. -- adapted from publisher info

Book of the Mind Jan 04 2021 With sections on perception, memory, emotion, thought, consciousness, and the unconscious, "The Book of the Mind" is an imaginative bringing together of case notes, journals, and letters, that present humanity's most significant attempts to understand the mind and how it works.

The Mortality Doctrine Series: The Complete Trilogy Jan 22 2020 From James Dashner, #1 New York Times bestselling author of the Maze Runner series, comes the complete collection of all three books in the bestselling Mortality Doctrine series— The Eye of Minds, The Rule of Thoughts, and The Game of Lives. This edge-of-your-seat cyber-adventure trilogy is the perfect gift for fans of Marie Lu and Brandon Sanderson. The VirtNet offers total mind and body immersion, and the more hacking skills you have, the more fun it is. Why bother following the rules when it’s so easy to break them? But some rules were made for a reason. Some technology is too dangerous to fool with. And one gamer has been doing exactly that, with murderous results. The government knows that to catch a hacker, you need a hacker. And they’ve been watching Michael. If he accepts their challenge, Michael will need to go off the VirtNet grid, to the back alleys and corners of the system human eyes have never seen—and it’s possible that the line between game and reality will be blurred forever. Also look for James Dashner’s Maze Runner series— The Maze Runner, The Scorch Trials, The Death Cure, The Kill Order, and The Fever Code. The first and second books, The Maze Runner and The Scorch Trials, are now major motion pictures featuring the star of MTV’s Teen Wolf, Dylan O’Brien; Kaya Scodelario; Aml Ameen; Will Poulter; and Thomas Brodie-Sangster! Praise for the Mortality Doctrine Series: “Dashner takes full advantage of the Matrix-esque potential for asking ‘what is real.’” —io9.com “Set in a world taken over by virtual reality gaming, the series perfectly capture[s] Dashner’s hallmarks for inventiveness, teen dialogue and an ability to add twists and turns like no other author.” —MTV.com “A brilliant, visceral, gamified mash-up of The Matrix and Inception, guaranteed to thrill even the non-gaming crowd.” —Christian Science Monitor

The Measure of All Minds Dec 03 2020 Are psychometric tests valid for a new reality of artificial intelligence systems, technology-enhanced humans, and hybrids yet to come? Are the Turing Test, the ubiquitous CAPTCHAs, and the various animal cognition tests the best alternatives? In this fascinating and provocative book, José Hernández-Orallo formulates major scientific questions, integrates the most significant research developments, and offers a vision of the universal evaluation of cognition. By replacing the dominant anthropocentric stance with a universal perspective where living organisms are considered as a special case, long-standing questions in the evaluation of behavior can be addressed in a wider landscape. Can we derive task difficulty intrinsically? Is a universal g factor - a common general component for all abilities - theoretically possible? Using algorithmic information theory as a foundation, the book elaborates on the evaluation of perceptual, developmental, social, verbal and collective features and critically analyzes what the future of intelligence might look like.

The Minds Behind the Games Oct 25 2022 Featuring interviews with the creators of 36 popular video games—including Deus Ex, Night Trap, Mortal Kombat, Wasteland and NBA Jam—this book gives a behind-the-scenes look at the creation of some of the most influential and iconic (and sometimes forgotten) games of all time. Recounting endless hours of painstaking development, the challenges of working with mega publishers and the uncertainties of public reception, the interviewees reveal the creative processes that produced some of gaming’s classic titles.

The Mind Nov 25 2022 An accessible and engaging account of the mind and its connection to the brain. The mind encompasses everything we experience, and these experiences are created by the brain—often without our awareness. Experience is private; we can't know the minds of others. But we also don't know what is happening in our own minds. In this book, E. Bruce Goldstein offers an accessible and engaging account of the mind and its connection to the brain. He takes as his starting point two central questions—what is the mind? and what is consciousness?—and leads readers through topics that range from conceptions of the mind in popular culture to the wiring system of the brain. Throughout, he draws on the latest research, explaining its significance and relevance. Goldstein discusses how the mind has been described and studied since the nineteenth century, and surveys modern approaches to studying mind–brain connections; considers consciousness and how the nervous system creates experience; and explores the hidden mechanisms of the brain. Then, in the heart of the book, he focuses on one principle that holds across a wide range of the mind’s functions: prediction. All the behaviors and physiological processes associated with prediction—including eye movements, tactile sensation, language, music, memory, and social processes—involve communication between different places in the brain. The mind emerges not from the firing of neurons in one specialized area but from communications that travel across what Goldstein calls “highways of the mind.”

The Growth Of The Mind Nov 01 2020 One of America's most prominent psychiatrists reveals the missing link between neuroscience and the qualities that make us fully human, arguing that new child-rearing patterns and impersonal technologies may interrupt the natural development of children.

The Manager Apr 26 2020 From the post room to the board room, everyone thinks they can be the manager. But how do you manage outrageous talent? What do you do to inspire loyalty from your players? How do you turn around a team in crisis? What's the best way to build long-term success? How can you lead calmly under pressure? The issues are the same whether you're managing a Premier League football team or a FTSE 100 company. Here, for the first time, some 30 of the biggest names in football management reveal just what it takes. With their every decision, remark, skill, and success or failure under constant scrutiny from the media and the fans, these managers need to be the most adroit of leaders. In The Manager they explain their methods, give examples of lessons they've learned along the way, and describe the decisions they make and the leadership they provide. Each chapter tackles a key leadership issue for managers in any walk of life and, in their own words, shows how the experts deal with the challenges they face in an abnormally high-pressure environment. Offering valuable lessons for business leaders and fascinating behind-the-scenes insights for football fans, The Manager is an honest, accessible and unprecedented look at the day-to-day work of these high-profile characters and the world of top-level football management. Contents: A Piece of the Action (Roy Hodgson); The Art of One-on-One (Carlo Ancelotti); Behind the Scenes (Arsène Wenger); Building High-performing Teams (Sam Allardyce); The Field of Play (Roberto Mancini); Handling Outrageous Talent (José Mourinho); Pursuing a Career Under Pressure (Brendan Rodgers); Seeing the Bigger Picture (Harry Redknapp); Creating Sustained Success (Sir Alex Ferguson); Crisis Response and Turnaround (Walter Smith); Triumph and Despair (Mick McCarthy). Also featuring: Gerard Houllier, Tony Pulis, Martin O'Neill, Neil Warnock, Howard Wilkinson, Kevin Keegan, Dario Gradi, Andre Villas-Boas, David Moyes, Alex McLeish, Hope Powell, Martin Jol, Glenn Hoddle, Chris Hughton, David Platt, Paul Ince, and George Graham.

Artificial Minds May 20 2022 Stan Franklin is the perfect tour guide through the contemporary interdisciplinary matrix of artificial intelligence, cognitive science, cognitive neuroscience, artificial neural networks, artificial life, and robotics that is producing a new paradigm of mind. Along the way, Franklin makes the case for a perspective that rejects a rigid distinction between mind and non-mind in favor of a continuum from less to more mind.
