This work explores the town meeting form of government. It provides a conception of town meeting democracy, positing that it is a de facto representative legislative body with three safety valves - access to all voters, the ability to add articles and call meetings, and the protest referendum. This book presents topical research in the study of democracy in theory and action from across the globe. Topics discussed herein include inclusive democracy as a theoretical and political project; the quality of democracy and media logic in Mexico; governance networks and democratic ideals and the role of the social democratic welfare state regime in reducing socioeconomic inequalities in health care. Argues that South Africans, like everyone else, need democracy for a more equal society What are democracies meant to do? And how does one know when one is a democratic state? These incisive questions and more by leading political scientist, Steven Friedman, underlie this robust enquiry into what democracy means for South Africa post 1994. Democracy is often viewed through a lens reflecting Western understanding. New democracies are compared to idealized notions by which the system is said to operate in the global North. The democracies of Western Europe and North America are understood to be the finished product and all others are assessed by how far they have progressed towards approximating this model. Power in Action persuasively argues against this stereotype. Friedman asserts that

democracies can only work when every adult has an equal say in the public decisions that affect them. Democracy is achieved not by adopting idealized models derived from other societies—rather, it is the product of collective action by citizens who claim the right to be heard not only through public protest action, but also through the conscious exercise of influence on public and private power holders. Viewing democracy in this way challenges us to develop a deeper understanding of democracy's challenges and in so doing to ensure that more citizens can claim a say over more decisions in society. Neither a work concerned only with her Marxist writings nor a personal biography concerned with her private life, this book examines Rosa Luxemburg's ideas on revolution and democracy and how the two are bound together by her views on the importance of political action. Stretching, historically, from 1863 to the present, this book covers in great detail the history and developments within the German SPD during her time, the 1905 and 1917 Russian Revolutions, the German Revolution, the outbreak of World War I and the imperialism that fuelled it. It then moves on to consider political and historical developments after her death and examines her arguments on revolution and democracy in the light of the post-revolutionary government in Nicaragua: the one violent revolution that sought to establish social democracy (but failed). Also covered are aspects of Rosa Luxemburg's life, her

important writings and actions, the relevant Marxist debates in which she was involved, including, for example Bernstein's arguments on social democracy through reform and, with Lenin, on revolutionary organization. A welcomed and timely collection presenting an important examination of the political and social context in which Luxemburg developed her activities and views and a complete understanding of the history of social democracy, the revolutionary times of a century ago and the relevance of their events and ideas for more recent revolutions for democracy in the twenty-first century. Contemporary society encounters profound economical, socio-ecological and political crises challenging the democratic foundation of our societies. This book addresses the potentials and challenges for Action Research supporting democratic alternatives. It offers a broad spectrum of examples from Scandinavian Action Research showing different openings towards democratic development. The book's first part contributes with a wide range of examples such as Action Research in relation to the Triple Helix/Mode II contexts, to design as a democratic process, to renewal of welfare work and public institutions, to innovation policies combining Action Research with gender science. In the second part of the book epistemological and ontological dimensions of Action Research are discussed addressing questions of validity criteria related to Action Research, the transformation of knowledge institutions and the

specific character of creativity in Action Research. The book offers a basis for theoretical as well as practical oriented discussions and critical reflections within the field of Action Research and related research orientations, involving a wide range of actors. Presented in a full-colour magazine format, this series provides resources suitable for Citizenship Education at 13-16. In line with the recommendations of the Advisory Committee on Education for Citizenship and the Teaching of Democracy in Schools, *Citizenship in Focus* is designed to encourage political literacy, social and moral responsibility, and community involvement. This electronic version has been made available under a Creative Commons (BY-NC-ND) open access license.

Knowledge, democracy and action: Community-university research partnerships in global perspectives is based on a three-year international comparative study undertaken by the Global Alliance on Community Based Research and supported by the UNESCO Chair in Community Based Research and Social Responsibility in Higher Education. It provides evidence from twenty case studies around the world on the power and potential of community and higher education based scholars and activists working together in the co-creation of transformative knowledge. The book draws on the experience and insights of thirty-seven scholars and practitioners from the Global South and North. Opening with a theoretical overview of knowledge, democracy and action, the

book is followed by analytical chapters providing lessons learned and capacity building in the north and the south, on the theory and practice of community university research partnerships, models of evaluation, approaches to measuring the impact and an agenda for future research and policy recommendations. In cities across the US, grass-roots organizations are working to revitalize popular participation in disenfranchised communities by bringing ordinary people into public life. This book examines the techniques used to achieve these goals. Vital Democracy outlines a theory of democracy in action, based on four elementary forms of democracy - pendulum, consensus, voter and participatory democracy - that are thoroughly analysed, compared and related to both the literature and the real world of democracy. Just like a few primary colours produce an array of shades, a few basic models of democracy appear, the author argues, to constitute a wide range of democratic variants in real life. Focusing on tried and tested democratic institutions, Frank Hendriks shows that the four models of democracy - with their divergent patterns of leadership, citizenship and governance, their inherent strengths and weaknesses - are never purely instantiated. He argues that wherever democracy is practiced with some level of success, it is always as hybrid democracy, thereby challenging those democratic reformers and theorists that have inspired the quest for democratic purity. Vital Democracy builds on Arend Lijphart's well-known work

which distinguishes between majoritarian and consensual democratic countries but also goes well beyond it, urging attention to non-national, non-formal, and non-representative expressions of democracy as well.
