Literary Studies in Action Jul 15 2021 `This is a textbook for the times, which addresses itself brilliantly to the twin phenomena of expanding horizons and diminishing resources of English studies.' - David Lodge

Perspectives on Perception and Action Oct 18 2021 Originally published in 1987, this title aimed to present an eclectic and biased account of the status of perception-action relationships in various fields at the time. The chapters can be divided into three sections. The first focuses on motor control, a neglected topic in the past and hence deserving the role of the starting point of this volume. In addition motor control provides a good background to discuss the clear sensory and perceptual effects. However, motor processes are also highly relevant to perception, which was usually less emphasized in the literature at the time. Therefore a special section is devoted to motor processes in perception together with the issue of integrating information from different sources. The book concludes with a section on attention and selection of perceptual information for subsequent action.

United Nations in Action Nov 18 2021 An introduction to the United Nations which illustrates the organization "in action" through a selection of case studies organized into six parts. The first part describes the institutional shape of the UN, including its purpose, principles, and structure. Subsequent sections provide case studies divided by type of activity, including peacekeeping and collective security; nuclear questions; human rights; new nations; and new initiatives in the face of global changes. Each chapter provides a brief guide to complex facts and legislation. Annotation copyright by Book News, Inc., Portland, OR

Climate Information for Public Health Action Jul 03 2020 Public health professionals, field epidemiologists, health management workers and health policymakers are increasingly concerned about the potential impact that climate change can have on public health. Climate not only determines the spatial and seasonal distribution of many public health events, such as infectious diseases, health outcomes of disasters and nutrition, but also is a key determinant of extreme heat waves and storm events that result in large impacts on morbidity and mortality. However, few public health professionals are aware of the ways in which climate information may help them manage the impacts of climate on their disease surveillance and control activities, as well as program implementation and evaluation. Climate Information for Public Health Action fills an identified knowledge gap for health policy makers and practitioners (along with climate service providers) in exploring why, when and how climate information can and should be incorporated into health decision-making. Drawing together contributions from a range of key thinkers in the field, this volume will focus on three climate sensitive health outcome areas: infectious disease, hydrometeorological disasters, and nutrition. Targeting a technical professional public health community involved in developing policy and/or ensuring good practice related to climate sensitive health outcomes, this book will be written in an accessible, informative style using the highest technical and scientific standards. It will also be a valuable resource for students and academics studying and working in the emerging field of environment and health.

Attraction, Distraction and Action Oct 06 2020 Over the last decade there has been a spate of research on the empirical phenomenon known as "attentional capture". Interest in capture can be attributed not only to its applied significance, but also to the implications of the phenomenon for theories of selective attention, as well as cognitive control in general. This growing interest, however, has also spawned a wide variety of experimental paradigms, empirical results, and theoretical perspectives. In June of 2000, 40 experimental psychologists converged on Villanova University for a conference and workshop on attentional capture. The intent was to provide an intimate forum for scientists from diverse perspectives and backgrounds, and using diverse methodologies to present their research on attentional capture and also engage in small group discussions on such key issues as the definition, measurement, and theoretical treatment of attention capture. This book presents a collection of chapters based on those presentations and discussions. Chapters are organized around areas such as neuroscience, visual cognition, developmental, individual differences and dynamical systems. The volume provides: a summary of the latest cutting edge research; an important compass for future research in this area; a useful survey of the field; contributions from internationally recognized experts in attention. Due to its exclusive focus on the topic of attentional capture the volume should make an excellent supplemental text or reference book for advanced undergraduate or graduate seminars in cognitive psychology and attention.

Collective Action 2.0 Oct 30 2022 Collective Action 2.0 explores the issues related to information and communication technologies (ICTs) in detail, providing a balanced insight into how ICTs leverage and interact with collective action, which will have an impact on the current discourse. Recent events in different authoritarian regimes, such as Iran and Egypt, have drawn global attention to a developing phenomenon in collective action: People tend to organize through different social media platforms for political protest and resistance. This phenomenon describes a change in social structure and behavior tied to ICT. Social media platforms have been used to leverage collective action, which has in some cases arguably lead, to political revolution. The phenomenon also indicates that the way information is organized affects the organization of social structures with which it interoperates. The phenomenon also has another side, which is the use of social media for activist suppression, state and corporate surveillance, commodifi cation of social processes, demobilization, or for the mobilization of collective action toward undesirable ends. Analyzes social media and collective action in an in-depth and balanced manner Presents an account of avoiding technological determinism, utopianism, and fundamentalism Considers the underlying theory behind quick-paced social media Takes an interdisciplinary approach that will resonate with all those interested in social media and collective action, regardless of fi eld specialism

Free Action Apr 04 2023 That a science of human conduct is possible, that what any man may do even in moments of the most sober and careful reflection can be understood and explained, has seemed to many a philosopher to cast doubt upon our common view that any human action can ever be said to be truly free. This book, first published in 1961, looks into crucially important issues that are often ignored in the familiar arguments for and against the possibility of free action. These issues are brought to light and examined in some detail.

Lucene in Action May 01 2020 When Lucene first hit the scene five years ago, it was nothing short of amazing. By using this open-source, highly scalable, super-fast search engine, developers could integrate search into applications quickly and efficiently. A lot has changed since then - search has grown from a "nice-to-have" feature into an indispensable part of most enterprise applications. Lucene now powers search in diverse companies including Akamai, Netflix, LinkedIn, Technorati, HotJobs, Epiphany, FedEx, Mayo Clinic, MIT, New Scientist Magazine, and many others. Some things remain the same, though. Lucene still delivers high-performance search features in a disarmingly easy-to-use API. Due to its vibrant and diverse open-source community of developers and users, Lucene is relentlessly improving, with evolutions to APIs, significant new features such as payloads, and a huge increase (as much as 8x) in indexing speed with Lucene 2.3. And with clear writing, reusable examples, and unmatched advice on best practices, Lucene in Action, Second Edition is still the definitive guide to developing with Lucene. Purchase of the print book comes with an offer of a free PDF, ePub, and Kindle eBook from Manning. Also available is all code from the book.

Designology May 13 2021 The more complex a human action is, the greater the need to formulate a plan of action, devise a method of implementation, and evaluate its execution. Such preparation is called design or planning, and can be defined as a conceptual preparation for action. Design and planning by themselves are so complex and important that they need informed preparation, which calls for systematic designological studies. This volume brings together original contributions of researchers and practitioners in design theory, design research, and design studies. Its main purpose is to highlight the possibilities of the discipline of designology. Doing and thinking, or thinking and doing, whatever the order, are intertwined. That is why praxiology, the science of action, defines design as a conceptual preparation of action. Included here are contributions from Jack Brzezinski, Eduardo Côrte-Real, Nigel Cross, Michel Faucheux, Joëlle Forest, Wojciech W. Gasparski, Ioannes B. Kapelouzos, Thorbjørn Mann, Tom Maver, Tarkko Oksala, Tufan Orel, Sevil Saryldz, and Ladislav Tondl. Designology is the latest volume in Transaction's highly regarded Praxiology series.

Performance Psychology Nov 06 2020 This book integrates findings from across domains in performance psychology to focus on core research on what influences peak and non-peak performance. The book explores basic and applied research identifying cognition-action interactions, perception-cognition interactions, emotion-cognition interactions, and perception-action interactions. The book explores performance in sports, music, and the arts both for individuals and teams/groups, looking at the influence of cognition, perception, personality, motivation and drive, attention, stress, coaching, and age. This comprehensive work includes contributions from the US, UK, Canada, Germany, and Australia. Integrates research findings found across domains in performance psychology Includes research from sports, music, the arts, and other applied settings Identifies conflicts between cognition, action, perception, and emotion Explores influences on both individual and group/team performance Investigates what impacts peak performance and error production

Determinism and Freewill Jun 13 2021 The Philosophical Inquiry concerning Human Liberty of Anthony Collins' was considered by Joseph Priestley and Voltaire to be the best book written on freewill up to their own time. Priestley admitted that it converted him to determinism and it had a powerful effect on Voltaire in the same direction. It seems important to place in its wider historical context a book which so influenced such men and which greatly impressed the philosophes in general. Therefore - and because such an account has value in itself - the Introduction contains a survey of the freewill controversy from the time of Hobbes to that of Leibniz, giving in some detail the opinions of Hobbes, Locke, Pierre Bayle, William King, Archbishop of Dublin, and Leibniz and an account of the Scholastic doctrine of liberty of indifference - opinions which either influenced Collins or against which he reacted. The value and originality of Collins' works need assessing. He was also at times liable to misinterpret or misunderstand the authorities he quoted. I have, therefore, subjected the Inquiry to a detailed critique. This also gives cross-references to parallel passages in Collins' works and those of the authors who influenced him, and, by discussing the philosophical and theological questions to which his writings give rise, obviates the need for a good many footnotes in the notes that follow the text.

Essays on Actions and Events Jan 27 2020 "Including two new essays, this volume is an updated edition of Davidson's classic *Essays on Actions and Events* (1980). A superb work on the nature of human action, it features influential discussions of numerous topics. These include the freedom to act; weakness of the will; the logical form of talk about actions, intentions, and causality; the logic of practical reasoning; Hume's theory of the indirect passions; and the nature and limits of decision theory."--BOOK JACKET.

Networks of Collective Action Mar 23 2022 Networks of Collective Action: A Perspective on Community Influence Systems develops a theoretically informed research framework for the structural analysis of social systems. To this end, special attention is given to two fundamental issues in structural analysis: First, how does one most usefully define or identify the elementary units, be they individuals, corporate actors, or population subgroups, that comprise a given social system, and in what ways should these elementary units be characterized or differentiated from one another? And, second, what are the relational modalities by which these actors are linked to one another in ways that are relevant to understanding how their individual preferences and behavior are coordinated or integrated with one another for purposes of collective action (i.e., to achieve collective goals)? The book is organized into three main parts. Part I describes the research site and its environmental context, and then makes a structural analysis of the internal social and value differentiation of the population subsystem. Part II focuses on the elite subsystem and on its role in resolving specific community controversies. Part III turns to a topic often neglected in studying democratically legitimized influence systems: the systematic theoretical and empirical characterization of the relationships between the elite and the population subsystems in the community.

Handbook of Perception and Action: Perception Aug 04 2020 This volume combines the classical fields of perception research with the major theoretical attitudes of today's research, distinguishing between experience- versus performance-related approaches, transformational versus interactional approaches, and approaches that rely on the processing versus discovery of information. Perception is separated into two parts. The first part deals with basic processes and mechanisms, and discusses early vision and later, yet still basic, vision. The second covers complex achievements with accounts of perceptual constancies and the perception of patterns, objects, events, and actions. Key Features * Gives an overview of the current status of research in classical areas and of current approaches to perception * Covers research areas and theoretical approaches * Combines American and European research * Emphasizes complex achievements of perception: auditory patterns, object identification, event perception, and perception of action

The Name of Action Sep 28 2022

Action Math 3, 1st Edition (MCR3U) Mar 03 2023 Designed for the Ontario Grade 11 Math Curriculum

Kinship in Action Apr 11 2021 For courses in Social Organization, Kinship, and Cultural Ecology. Kinship has made a come-back in Anthropology. Not only is there a line of noted, general, introductory works and readers in the topic, but theoretical discussions have been stimulated both by technological changes in mechanisms of reproduction and by reconsiderations of how to define kinship in the most productive ways for cross-cultural comparisons. In addition, kinship studies have moved away from the minutiae of kin terminological systems and the “kinship algebra” often associated with these, to the broader analysis of processes, historical changes and fundamental cultural meanings in which kin relationships are implicated. In this changed, and changing context both Andrew Strathern and Pamela J. Stewart -- both of the University of Pittsburgh -- bring together a number of interests and concerns, in order to provide pointers for students, as well as scholars, in this field of study. Taking an explicitly processual approach, the authors examine definitions of terms such as kinship itself, approach the topic in a way that is invariably ethnographic, and deploy materials from field areas where they themselves have worked.

Time and the Philosophy of Action Jul 27 2022 Although scholarship in philosophy of action has grown in recent years, there has been little work explicitly dealing with the role of time in agency, a role with great significance for the study of action. As the articles in this collection demonstrate, virtually every fundamental issue in the philosophy of action involves considerations of time. The four sections of this volume address the metaphysics of action, diachronic practical rationality, the relation between deliberation and action, and the phenomenology of agency, providing an overview of the central developments in each area with an emphasis on the role of temporality. Including contributions by established, rising, and new voices in the field, Time and the Philosophy of Action brings analytic work in philosophy of action together with contributions from continental philosophy and cognitive science to elaborate the central thesis that agency not only develops in time but is shaped by it at every level.

Reimagining Communication: Action Dec 20 2021 As a part of an extensive exploration, Reimagining Communication: Action investigates the practical implications of communication as a cultural industry, media ecology, and a complex social activity integral to all domains of life. The Reimagining Communication series develops a new information architecture for the field of communications studies, grounded in its interdisciplinary origins and looking ahead to emerging trends as researchers take into account new media technologies and their impacts on society and culture. The diverse and comprehensive body of contributions in this unique interdisciplinary resource explore communication as a form of action within a mix of social, cultural, political, and economic contexts. They emphasize the continuously expanding horizons of the field by engaging with the latest trends in practical inquiry within communication studies. Reflecting on the truly diverse implications of communicative processes and representations, Reimagining Communication: Action covers key practical developments of concern to the field. It integrates diverse theoretical and practice-based perspectives to emphasize the purpose and significance of communication to human experience at individual and social levels in a uniquely accessible and engaging way. This is an essential introductory text for advanced undergraduate and graduate students, along with scholars of communication, broadcast media, and interactive technologies, with an interdisciplinary focus and an emphasis on the integration of new technologies.

Collective Action Dec 08 2020 Public choice, an important subdiscipline in the field of political theory, seeks to understand how people and societies make decisions affecting their collective lives. Relying heavily on theoretical models of decision making, public choice postulates that people act in their individual interests in making collective decisions. As it happens, however, reality does not mirror theory, and people often act contrary to what the principal public choice models suggest. In this book, Russell Hardin looks beyond the models to find out why people choose to act together in situations that the models find quite hopeless. He uses three constructs of modern political economy--public goods, the Prisoner's Dilemma, and game theory--to test public choice theories against real world examples of collective action. These include movements important in American society in the past few decades--civil rights, the Vietnam War, women's rights, and environmental concerns. This classic work on public choice will be of interest to theoreticians and graduate students in the fields of public choice, political economy, or political theory--and to those in other disciplines who are concerned with the problem of collective action in social contexts.

Free Action Feb 28 2020

Management in Action Aug 28 2022 This title, originally published in 1984, is based on a study of the work of general and production managers in companies in Britain and Germany, and gives a life-like account of the realities of management, including the problems, crises and unresolved tensions. Throughout the book the author draws comparisons between management style and performance in Britain and Germany. Designed primarily for management and business studies undergraduates, the book gives an excellent idea of what industry is really like. For students who are committed to a career in management but who lack experience of industry, this realistic and down-to-earth account will be invaluable.

The Chemistry of Enzyme Action Jun 25 2022 The Chemistry of Enzyme Action

English in Action 1 May 25 2022 Fun, engaging, and action-packed! Students learn better and are more motivated when they can put English into action! The second edition of English in Action provides learners with competency-based support for building language, life, and work skills in real world settings. Learners are engaged as workers, family members, and citizens through a communicative, practical, and active approach. Fun English in Action is filled with fun and exciting content and activities which motivate students to master the skills presented. Engaging English in Action empowers students and promotes learner persistence through dynamic, communicative activities, helping to build confidence in and out of the classroom. Action-packed English in Action encourages learners to communicate and participate in a lively learning process that offers interactive technology options, providing various avenues to learning.

ABC of Action Learning Feb 02 2023 Reg Revans based his theories of Action Learning on 30 years of work and observation. This revised and updated reissue of the definitive text, ABC of Action Learning, is a clear, easily-read primer for anyone wishing to learn about and apply his methods. It offers a succinct, practical guide to integrating action learning into every-day situations, and enhancing the practical and managerial skills of the workforce.

Silencer Jan 01 2023 'Authentic to the core' Daily Express Classic McNab - original, pulse-pounding and utterly compelling. _____ Nick Stone has always kept his job as ex-SAS trouble shooter at arms' length from his home life. But when his son falls dangerously ill and the doctor who saves him comes under threat from an old adversary, it is no longer possible. Life just got very personal. To stop his cover being terminally blown, he must follow a trail that begins in Triad-controlled Hong Kong. He is propelled back into the brutal world he thought he'd left behind. The forces ranged against him have guns, helicopters, private armies and a terrified population in their vice-like grip. Nick Stone has two decades of operational skills – but this time, that may not be enough...

Praxiology and the Reasons for Action Sep 04 2020 This volume explores two traditions in practical philosophy: action theory, which concerns the nature of motivation for human action, and praxiology, the study of human action. By bringing different perspectives together, the volume strives to contribute to the international debate on theories of reasons for action as a philosophy of action. The volume consists of three main parts. The first part, "Reasons for Action," bridges the gap between reasons for action theories and praxiology. The second part of the volume, titled "Theories of Action," explores philosophical approaches to action. Finally, in the third part, "Applications," the contributors show several ways of applying praxiological ways of thinking and acting to the problems of reflection assessment, solving action incompleteness, and knowledge management. The ultimate goal of this volume is to broaden the scientific view of action: to establish a perspective on action that is permeated by moral theories on the one hand, and accounts focused on efficiency and economy of action on the other hand. This work is the newest volume in Transaction's Praxiology series.

A Theory of Action Identification Mar 11 2021 First published in 1985. Routledge is an imprint of Taylor & Francis, an informa company.

Moral Relativism and Reasons for Action Feb 07 2021 Originally published in 2003, this book examines moral relativism and the author discusses the main arguments for Appraiser Relativism and Agent Relativism. The final chapter of the book discusses the implication of some recent developments in metaethics and develops a theory of reasons for action based on the way in which an action can be good as an alternative to the desire-based, agent-centred account critiqued in the earlier chapters.

Volitional Action Dec 28 2019 Individuals from diverse disciplines, including neurology, physiology, psychology, mathematics, and engineering have contributed to this volume. Their scientific investigations of volitional action are part of the resurgence of interest in the psychology and physiology of volition which has taken place in recent years. The book comprises a significant sample of their observations, both rational and empirical, which have new practical implications for our understanding of human conduct. The book was designed to serve a threefold purpose: a) to consolidate the gains of the various scholars, relatively isolated in their respective disciplines, b) to foster and help focus future research on conation and self-control and c) to provide practitioners in applied psychology with a broad-based tutorial.

Ethics and Action May 05 2023 Originally published in 1972, and now with a new Preface by Michael Campbell, this collection of essays on closely related issues in moral philosophy looks at different aspects of people's understanding of their own and others' actions in ethical dimensions. The book discusses the ways in which the understanding both of man's own nature and of the nature of the world in which he lives, is a function of his social existence. It discusses questions about the character of moral deliberation and decision, the nature of the human will and its connections with action, and the extent to which an individual's moral reasonings must claim universal applicability.

Spark in Action, Second Edition Feb 19 2022 Summary The Spark distributed data processing platform provides an easy-to-implement tool for ingesting, streaming, and processing data from any source. In Spark in Action, Second Edition, you'll learn to take advantage of Spark's core features and incredible processing speed, with applications including real-time computation, delayed evaluation, and machine learning. Spark skills are a hot commodity in enterprises worldwide, and with Spark's powerful and flexible Java APIs, you can reap all the benefits without first learning Scala or Hadoop. Purchase of the print book includes a free eBook in PDF, Kindle, and ePub formats from Manning Publications. About the technology Analyzing enterprise data starts by reading, filtering, and merging files and streams from many sources. The Spark data processing engine handles this varied volume like a champ, delivering speeds 100 times faster than Hadoop systems. Thanks to SQL support, an intuitive interface, and a straightforward multilanguage API, you can use Spark without learning a complex new ecosystem. About the book Spark in Action, Second Edition, teaches you to create end-to-end analytics applications. In this entirely new book, you'll learn from interesting Java-based examples, including a complete data pipeline for processing NASA satellite data. And you'll discover Java, Python, and Scala code samples hosted on GitHub that you can explore and adapt, plus appendixes that give you a cheat sheet for installing tools and understanding Spark-specific terms. What's inside Writing Spark applications in Java Spark application architecture Ingestion through files, databases, streaming, and Elasticsearch Querying distributed datasets with Spark SQL About the reader This book does not assume previous experience with Spark, Scala, or Hadoop. About the author Jean-Georges Perrin is an experienced data and software architect. He is France's first IBM Champion and has been honored for 12 consecutive years. Table of Contents PART 1 - THE THEORY CRIPPLED BY AWESOME EXAMPLES 1 So, what is Spark, anyway? 2 Architecture and flow 3 The majestic role of the dataframe 4 Fundamentally lazy 5 Building a simple app for deployment 6 Deploying your simple app PART 2 - INGESTION 7 Ingestion from files 8 Ingestion from databases 9 Advanced ingestion: finding data sources and building your own 10 Ingestion through structured streaming PART 3 - TRANSFORMING YOUR DATA 11 Working with SQL 12 Transforming your data 13 Transforming entire documents 14 Extending transformations with user-defined functions 15 Aggregating your data PART 4 - GOING FURTHER 16 Cache and checkpoint: Enhancing Spark's performances 17 Exporting data and building full data pipelines 18 Exploring deployment

Action Research in Organisations Aug 16 2021 The current orthodoxy is that 'knowledge' is the most powerful resource for organisational success. So how can managers develop the appropriate knowledge base to make their organisations grow? The answer lies in action research. Action research is increasingly perceived and used as a powerful methodology to promote professional awareness and development. However, there are very few texts that demonstrate how this can be utilised to promote management and organisational improvement or that emphasise the reflective nature of improving professionalism. Action Research in Organisations fills this gap. Aimed at both practising managers and university students alike, key features of this title include: * the location of management and organisational theory within a framework * examination of the principles and practice of action research * real-world examples and case studies of people attempting to improve their own situations through action research.

Handbook of Perception and Action Jan 09 2021 This up-to-date handbook focuses on the study of action, or "motor control," which examines movement and skill and the internal processes that lead to them. As action is interrelated with cognition, this is a vigorous field of

investigation. Written by international experts, *Motor Skills* provides current reviews on general processes important to motor control--learning, coordination, timing, planning, and control--and on the individual skills of throwing, catching, reaching, and typing. The text describes important conceptual and methodological advances regarding control theory and timing, and is divided into two sections which analyze skill from the perspectives of general processes and individual skills.

Philosophy of Action Apr 23 2022 This book offers an accessible and inclusive overview of the major debates in the philosophy of action. It covers the distinct approaches taken by Donald Davidson, G.E.M. Anscombe, and numerous others to answering questions like "what are intentional actions?" and "how do reasons explain actions?" Further topics include intention, practical knowledge, weakness and strength of will, self-governance, and collective agency. With introductions, conclusions, and annotated suggested reading lists for each of the ten chapters, it is an ideal introduction for advanced undergraduates as well as any philosopher seeking a primer on these issues.

CHANGE! A Student Guide to Social Action Mar 30 2020 This is the first practical social change text devoted to students working in an academic environment. While there are many books about community organizing and social change, there are no college texts focusing on how to provide real-world experience with academic content taking into consideration the flow of the academic term. *CHANGE! A Student Guide to Social Action* is written specifically for faculty and staff to use with college students with the goal of helping students bring about the change they believe is necessary to make our community a better place to live.

New Directions in Action Research Jun 01 2020 First published in 1996. Routledge is an imprint of Taylor & Francis, an informa company.

Attention Jan 21 2022

United Nations in the Contemporary World Nov 30 2022 Fifty years after the creation of the United Nations, there exists a vigorous debate as to its limitations and possibilities. In *United Nations in the Contemporary World*, David J. Whittaker examines how the UN works and assesses its position as a world organisation. The author explores the nature of the UN as a regime in contemporary international relations. He considers the changing terms of reference of the UN and includes discussion of: * UN organisational procedures and principles; * recent historical case studies, including studies on peacekeeping * the role of the UN in global urbanisation, arms control and in supplying aid for refugees * past and future internal reform, goals, achievements With an annotated bibliography and a helpful glossary *United Nations in the Contemporary World* provides an interdisciplinary history of the UN and debates the key issues for its future. David J Whittaker gives a cogent analysis of how the UN addresses today's world problems and how it can adapt for the future.

Free Action Sep 16 2021 "That a science of human conduct is possible, that what any man may do even in moments of the most sober and careful reflection can be understood and explained, has seemed to many a philosopher to cast doubt upon our common view that any human action can ever be said to be truly free.
