Negotiation for Entrepreneurship Dec 15 2021 Everyone has desires. Spiritual leaders too give up the mundane life. However, they carry the deeply rooted desire to attain insights and enlightenment, eventually. Irrespective of what life one leads, one core but common desire is to enjoy the autonomy to make decisions. However, life introduces one to several ups and downs resulting in both successes and failures. Nonetheless, one desires to be happy throughout and enjoy whatever is in possession. Also, one aspires to achieve all that one feels capable of achieving, thus driving oneself to take risks against the opportunities identified. In the backdrop, the present book is for every individual who is either an aspiring entrepreneur or serial entrepreneur, irrespective of the domain expertise or industry one represents. The book attempts to focus and address a pressing pain point of entrepreneurs: quite often entrepreneurs fail to strike great deals on account of poor negotiation skills. The stated pain point not only becomes a hindrance in the initial stage of start-ups but it also becomes a major challenge for the entrepreneur as the start-up scales up, expands, diversifies, or exits from the market. The book is an attempt to eliminate the pain point of poor negotiation skills, one of the major factors responsible for the success and failure of start-up ventures in modern times.

Susan Marlow, International Small Business Journal The data and information presented in this work will be of particular interest to students and scholars of entrepreneurship or labor and women s studies. Recommended. General readers; upper-division undergraduate through professional collections. E.P. Hoffman, Choice Enterprising new firms drive economic growth, and women around the world are important contributors to that growth. As entrepreneurs, they seize opportunities, develop and deliver new goods and services and, in the process, create wealth for themselves, their families, communities, and countries. This volume explores the role women entrepreneurs play in this economic progress, highlighting the challenges they encounter in launching and growing their businesses, and providing detailed studies of how their experiences vary from country to country. Statistics show that businesses owned by women tend to remain smaller than those owned by men, whether measured by the number of employees or by the size of revenues. Because women-led firms fail to grow as robustly, the opportunities to innovate and expand are limited, as are the rewards. Based on recent studies that examine the links between entrepreneurial supply and demand issues, this volume provides insights into how women around the world are addressing the challenges of entrepreneurial growth. The first set of chapters consists of country overviews and provides discussions of the state of women growing businesses. The second set of chapters describes research projects under way in different countries and explores more focused topics under the umbrella of women business owners and business growth. The volume concludes with an agenda and projects for future research. Academics and policymakers will gain a greater understanding of women s entrepreneurial behaviors and outcomes through this path-breaking volume. Those who support women through education and training, policymaking, or providing entrepreneurial resources will also find the volume of great practical interest.

Student Entrepreneurship in the Social Knowledge Economy Aug 30 2020 Traditionally, the study of entrepreneurial behavior focuses on such factors as (i) the personality characteristics that distinguish the entrepreneur from non-entrepreneur and (ii) demographic characteristics such gender, age, familiar antecedents and education. With particular respect to investigating the development, acquisition, and dissemination of entrepreneurial skills and behaviors, the authors focus on the university environment, as a locus of research and innovation, where students are exposed to a wide variety of influences that are enhanced by a high degree of connectivity. The underlying theme of this volume is to develop our understanding of the sociology of student entrepreneurial behavior and in doing so attempt to synthesize literature investigating individual talent with the literature on concurrent knowledge sourcing in the pursuit of entrepreneurial activities. Specifically, the authors investigate the degree to which access to diverse knowledge (in addition to such psychological characteristics and tolerance of ambiguity and risk taking) influences the nature and probability of entrepreneurial success. Moreover, they explore the role of social media and social networking in facilitating access to distributed and disparate information and knowledge. Their research addresses such timely questions as: Where do entrepreneurial opportunities come from? How can higher education best stimulate the creation of firms emanating from young and smart minds in colleges and universities? What is the value of MOOCs for frequent, early, and "thick" communication among the various specialties needed to accomplish entrepreneurial projects? How do we know whether social media affect students' responses to new knowledge and new ideas? To what extent do educational practices affect racial and ethnic differences in student entrepreneurship? What is the role of the indigenous minority student entrepreneur in establishing high-technology firms? The result is a multi-dimensional approach that sheds light on the dynamics of education, knowledge creation, social networking, innovation and new business development.
