Judge Mettraux's four-volume compendium, *International Crimes: Law and Practice*, will provide the most detailed and authoritative account to-date of the law of international crimes. It is a scholarly tour de force providing a unique blend of academic rigour and an insight into the practice of international criminal law. The compendium is unrivalled in its breadth and depth, covering almost a century of legal practice, dozens of jurisdictions (national and international), thousands of decisions and judgments and hundreds of cases. This first volume discusses in detail the law of genocide: its definition, elements, normative status, and relationship to the other core international crimes. While the book is an invaluable tool for academics and researchers, it is particularly suited to legal practitioners, guiding the reader through the practical and evidential challenges associated with the prosecution of international crimes. "In the first in-depth study of its kind, Stuart Green exposes the ambiguities and uncertainties that pervade the white-collar crimes, and offers an approach to their solution. Drawing on recent cases involving such figures as Martha Stewart, Bill Clinton, Tom DeLay, Scooter Libby, Jeffrey Archer, Enron's Andrew Fastow and Kenneth Lay, HealthSouth's Richard Scrushy, Yukos Oil's Mikhail Khodorkovsky, and the Arthur Andersen accounting firm, Green weaves together what at first appear to be disparate threads in the criminal code, revealing a complex and fascinating web of moral insights about the nature of guilt and innocence, and what, fundamentally, constitutes conduct worthy of punishment by criminal sanction."--BOOK JACKET. This book contains a collection of essays by leading experts linked to the outstanding characteristics of the scholar in honour of whom it is published, Tullio Treves, who combines his academic background with his practical experiences of a negotiator of international treaties and a judge of an international tribunal. It covers international public and private law related to international courts and the development of international law. Under Article 38 of its Statute, the International Court of Justice can apply judicial decisions only as a "subsidiary means for the determination of rules of law". However,

there are many reasons to believe that international courts and tribunals do play quite an important role in the progressive development of international law. There are a number of decisions which are inevitably recalled as the first step, or a decisive step, in the process of the formation of a new rule of customary international law. In these cases, can the judge be considered as a subsidiary of others? Are these cases compatible with the common belief that a judge cannot create law? Is this a peculiarity of international law, which is characterized by the existence of several courts but the lack of a legislator? Do decisions by different courts lead to the consequence of a fragmented international law? This volume provides the reader with an elaboration of various questions linked to the legislative role of courts. In their choices of subjects, some contributors have taken into account the general aspects of the development of international rules through court decisions or specific sectors of international law, such as human rights, international crimes, international economic law, environmental law and the law of the sea. Others have chosen the subject of the rules on jurisdiction and procedure of international courts. The question of the courts' role in the development of areas of law different from public international law, namely private international law and European Union law, has also been considered. The information and views contained in this book will be of great value to academics, students, judges, practitioners and all others interested in the public and private international law aspects of the link between international courts and the development of international law.

This book explores the sheer complexity of the SSM's institutional design adopting an comprehensive approach to banking supervision. At its core, this work examines the tangible mechanisms of prudential regulation or supervision both at the European and national levels, offering a comparative analysis of ten national systems. Reflecting the results of an intensive, four-year research project that saw the collaboration of academics and practitioners, it addresses two interrelated issues. It investigates the efficacy of the shared national- and EU-level enforcement system the EU introduced in reaction to the financial and banking crisis. Secondly, it scrutinizes the role that criminal law can play in sanctioning the breaches to banking regulation.

Uncertainty Proceedings 1994 The Criminalization series arose from an interdisciplinary investigation into criminalization, focussing on the principles that might guide decisions about what kinds of conduct should be criminalized, and the forms that criminalization should take. Developing a normative theory of criminalization, the series tackles the key questions at the heart of the issue: what principles and goals should guide legislators in deciding what to criminalize? How should criminal wrongs be classified and differentiated? How should law enforcement officials apply the law's specifications of offences? This, the fifth book in the series, offers a historical and conceptual account of the development of the modern criminal law in England and as it has spread to common law jurisdictions around the world. The book offers a historical perspective on the development of theories of criminalization. It shows how the emergence of theories of criminalization is inextricably linked to modern understandings of the criminal law as a conceptually distinct body of rules, and how this in turn has been shaped by the changing functions of criminal law as an instrument of government in the modern state. The book is structured in two main parts. The first traces the development of the modern law as a distinct, and conceptually distinct body of rules, looking in particular at ideas of jurisdiction, codification and responsibility. The second part then engages in detailed analysis of specific areas of criminal law, focusing on patterns of criminalization in relation to property, the person, and sexual conduct. This is the second edition of a highly successful book - the only one available on this topic. The first edition was written by a well-known massage therapist and author, Gayle MacDonald. For the second edition Gayle has brought in a co-author, Carolyn Tague. Both are well-known and highly respected in the field of hospital massage therapy. The second edition focuses solely on the adult patient and has new chapters on aromatherapy massage, end-of-life care, cultural sensitivity and understanding the therapeutic relationship between patient and practitioner. It also incorporates new sections on addiction and neurological disorders, as well as the most recent research from around the world. The new edition is highly illustrated with full color photographs and drawings, including many new illustrations.

FinTech is an emerging field and most of the existing literature appears in the form of industry reports, consulting reports, working

papers, and policy recommendations. Although FinTech has been widely discussed for many years, there is a paucity of literature on some categorizations of FinTech. This edited volume distinguishes itself by focusing on academic works of scholars with a different area of specialization in the FinTech field including technology, innovation and regulation. In particular, the book focuses on the laws and technologies necessary to comprehend the role of the legal system in technological innovations and will be helpful for regulatory policymaking. A practical compendium that explains concepts and follows through on applications in FinTech including its challenges and evolving nature, this book will be of interest to students, scholars, practitioners as well as regulators and policy makers. Nearly the whole of America's partisan politics centers on a single question: Can markets solve our social problems? And for years this question has played out ferociously in the debates about how we should educate our children. From the growth of vouchers and charter schools to the implementation of No Child Left Behind, policy makers have increasingly turned to market-based models to help improve our schools, believing that private institutions--because they are competitively driven--are better than public ones. With *The Public School Advantage*, Christopher A. and Sarah Theule Lubienski offer powerful evidence to undercut this belief, showing that public schools in fact out-perform private ones. Molecular magnetism is a new field of research dealing with the synthesis and study of the physical properties of molecular assemblies involving open-shell units. It is essentially interdisciplinary, joining together organic, organometallic and inorganic chemists, as well as theoreticians, physicists and materials scientists. At the core of research into molecular magnetism lie design and synthesis of new molecular assemblies exhibiting bulk properties such as long-range magnetic ordering or bistability with an hysteresis effect, which confers a memory effect on the system. In such terms, magnetism may be considered a supramolecular function. The first eight contributions to this volume present the state of the art in organic supramolecular chemistry, emphasising interlocked systems and molecular trees. The following six articles are devoted to molecular materials constructed from organic radicals and transition metal units. Molecular bistability is then focused on, followed by metal-organic and coordination magnetic materials. A new approach to nano-sized particles closes the work. Seeing is Understanding. The first VISUAL guide to marine diesel systems on recreational boats. Step-by-step instructions in clear, simple drawings explain how to maintain, winterize and recommission all parts of the system - fuel deck fill - engine - batteries - transmission - stern gland - propeller. Book one of a new series. Canadian author is a sailor and marine mechanic cruising aboard his 36-foot steel-hulled Chevrier sloop. Illustrations: 300+ drawings Pages: 222 pages Published: 2017 Format: softcover Category: Inboards, Gas & Diesel The definitive source on small-unit tactics
