*The Internet and New Social Formation in China* Jul 27 2022 There are billions of internet users in China, and this number is continually growing. This book looks at the various purposes of this internet use, and provides a study about how the entertainment-consuming users form into publics through the mediation of technologies in the era of network society. It questions how individuals, mediated by new information and communication technologies, come together to form new social categories. The book goes on to investigate how public(s) is formed in the era of network society, with particular focus on how fans become publics in a society that follows the logic of network. Using online surveys and in-depth interviews, this book provides a rich description of the process of constructing a new social formation in contemporary China.

**Word-Formation in Context** Apr 23 2022 This fascinating book treats the use of words from a completely new perspective. Far from being purely

abstract entities, words are believed to emerge from an interaction between morphological, syntactic, semantic and pragmatic components. For this reason, the book draws from a vast spectrum of naturally occurring texts representing almost every style, register, and genre. It uses an extremely wide variety of language, and provides a key to help readers check their answers to the questions it poses.

**Growth, Dissolution and Pattern Formation in Geosystems** Mar 03 2023 This book is based on the 1997 Kongsberg seminar, organised by the Department of Geology at the University of Oslo. The seminar brought together scientists from various disciplines involved in the study of growth and dissolution of minerals and pattern formation in geosystems. The volume includes several chapters dealing with non-equilibrium growth processes and pattern formation, which have recently become recognised as much more common in geological systems than hitherto thought. The multidisciplinary context of this book will promote cross-fertilisation of ideas in a rapidly developing area that has a wide range of important applications in mineralogy and petrology as well as in other areas of science and technology. Audience: This volume will be of interest not only to a wide audience within the geoscience community, but also to scientists working in related disciplines interested in mineral growth and dissolution processes in general and the coupling of such processes with transport and deformation in sedimentary and metamorphic systems. *The Making of Hong Kong Society* Mar 11 2021 Making generous use of rarely studied historical archives, Chan studies the formation into classes of the British merchants, the Chinese merchants, and the Chinese laborers of Hong Kong between 1841 and 1922. During this period, Hong Kong developed from a "barren rock" into a complex society. While recognizing the influence of China and Britain on events in Hong Kong, Chan emphasizes the importance of treating Hong Kong as a society with its own integrity. By intermeshing historical and sociological analysis he seeks not only to describe what happened but to analyze the social and economic relationships of the various historical actors involved in a vital episode of Hong Kong's economic history.

**Neo-Industrial Organising** Jan 21 2022 *Neo-Industrial Organising* explores an emerging area of importance in management and organisation studies, namely the trend towards a projectization of the economy as a whole and the inter- and intra-organisational relations of renewal projects. By reporting on the experiences of twenty-five renewal projects from a wide variety of both local and international organisations, the authors develop a theoretical framework based on action and knowledge, in order to answer such key questions as: What is neo-industrial management? What does the future hold for organisations? How will institutions be formed? What effects will neo-industrial organising have on the individual and his/her work situation? Topics covered include: \* industrial renewal, organisation and management \* project management and temporary organisation \* personnel recruitment, selection and training \* societal infrastructure Distinctive, relevant and accessibly written, this book will interest researchers and students in the field of organisational behaviour.

*Group Formation in Economics* Sep 16 2021 Broad and diverse ranges of activities are conducted within and by organized groups of individuals, including political, economic and social activities. These activities have become a subject of intense interest in economics and game theory. Some of the topics investigated in this collection are models of networks of power and privilege, trade networks, co-authorship networks, buyer-seller

networks with differentiated products, and networks of medical innovation and the adaptation of new information. Other topics are social norms on punctuality, clubs and the provision of club goods and public goods, research and development and collusive alliances among corporations, and international alliances and trading agreements. While relatively recent, the literature on game theoretic studies of group formation in economics is already vast. This volume provides an introduction to this important literature on game-theoretic treatments of situations with networks, clubs, and coalitions, including some applications.

**The Book of Formation** Jul 15 2021 This debut novel—told in interviews—spans 20 years in the rise and fall of the charismatic leader of a seductive self-help movement. In the 1990s, a talk show host leads the "personality movement," an integrative approach to radical self-transformation. Mayah, the movement's architect and celebrity advocate, adopts a curious, wild child named Masha Isle. A guinea-pig for the movement, and the key to its future, Isle is the subject of the eight interviews that comprise this book. As the interviewer's objectivity disintegrates—even as the movement's legitimacy becomes increasingly suspect—he becomes obsessed with Masha. And all of that is thrown into question when tragedy strikes. The stunning debut of a new literary talent, and a fascinating take on the cult of personality: about celebrities need to destroy and recreate themselves to stay relevant, public personalities coming to belong to everyone, and about our need to see everyone as a kind of celebrity.

**Bonding with the Lord** May 01 2020 Few other Hindu gods guide a regional consciousness, pervade walks of everyday life and define a collective psyche the way Lord Jagannath does in Odisha and its contiguous areas. Jagannath is metonymic of Odisha and the Odia way of life, arguably much more than any other god for a particular geography or its peoples. While not derecognising the historical and the spiritual aspects of Jagannath, *Bonding with the Lord* attempts to look at the deployment of Jagannath in contemporary cultural practices involving the sensorium in the widest sense. The project of a cultural Jagannath not only materialises him in people's everyday practices but also democratises scholarship on him. The expansion of the scope of research on Jagannath to cultural expressions in a more encompassing way rather than confining to 'elitist' religious/literary sources makes him an everyday presence and significantly enhances his sphere of influence. Jagannath's 'tribal' origin, his

association with Buddhism and Jainism and his avatari status make him an all-encompassing, multilayered symbol and a treasure trove for multiple interpretations.

**Pattern Formation in Morphogenesis** Mar 30 2020 Pattern Formation in Morphogenesis is a rich source of interesting and challenging mathematical problems. The volume aims at showing how a combination of new discoveries in developmental biology and associated modelling and computational techniques has stimulated or may stimulate relevant advances in the field. Finally it aims at facilitating the process of unfolding a mutual recognition between Biologists and Mathematicians of their complementary skills, to the point where the resulting synergy generates new and novel discoveries. It offers an interdisciplinary interaction space between biologists from embryology, genetics and molecular biology who present their own work in the perspective of the advancement of their specific fields, and mathematicians who propose solutions based on the knowledge grasped from biologists.

*Triggered Star Formation in a Turbulent Interstellar Medium (IAU S237)* Feb 19 2022 New stars form in the dense turbulent gas clouds of galaxies. A wide variety of processes, with scales ranging from the size of a galaxy to the size of an individual star, drive interstellar turbulence and trigger dense cloud formation. The formation of these clouds is the subject of the IAU S237. This book is the most up-to-date review of all aspects of cloud and star formation. It summarizes the current state of understanding of triggered star formation in a turbulent interstellar medium. Topics covered range from observations and theory of turbulence in the ISM, to the formation of shells and young stars inside of shells, and molecular clouds, star clusters, and galaxies, all with a view toward understanding how star formation begins in these various environments. It is the first comprehensive overview of triggered star formation, and one of the few compendiums available on ISM turbulence.

**Coaching the Modern 2-6-2 Soccer Formation** Jan 09 2021 The game of soccer is perpetually in a constant state of change; as new tactical trends appear each and every season. Some of the changes are adaptations and variations from the past, while others are completely original. If we roll back the clock to the first international friendly match ever played in 1872, you would have witnessed England playing a 1-2-7 formation, against the Scottish 2-2-6. Soccer's early formations were built with few players in the back and many up top. Fast forward to the 1920's and things began to change, this is when the 3-2-2-3 W-M formation made its debut, introduced by Herbert Chapman at Arsenal. Then jump ahead to the 1966 World Cup, as England played the first diamond 4-4-2 formation. Change continued to come in 1974, when the Dutch coach Rinus Michels lined the team up in a 4-3-3 formation, introducing the world to "Clockwork Orange". The 2000's has been responsible for the emergence of the 4-2-3-1 formation, along with the 4-6-0 "false 9", introduced by the Spanish. However, the question every top coach is constantly pursuing is, what is the next major trend or change in the game? We have already seen some signs of change, with the inverted wingbacks of Guardiola at Manchester City, and the deterioration of the classic back four, even Arsenal have changed to a 3 back system! As we look at the history of soccer, the changes in formations are pronounced. The original formations have been compared to inverted or upside down pyramids, with 7 attacking players up top and only 2 in the back. As the game progressed, the pyramid completely turned around, as seen with the 4-2-3-1

formation, which took on a realistic pyramid type of shape, and now the shape appears to be changing again. This book focuses on what very well may be one of the formations of the future, the 2-6-2 formation. We saw the 2-6-2 formation used when Guardiola's Bayern, dismantled Roma in a Champions League match 7-1. Argentina recently played a 2-3-4-1 in a friendly match against Singapore. The reality is that the modern game is seeing the pyramid shape turning more into a rhombus, small on the bottom, large in the middle and small on top. Obviously, simply talking about general shapes is an over simplification of formations, but this type of rhombus idea, seems to be where the formation trend is heading. How many teams have switched to a 3-5-2 in the last 24 months? Many more than a few years ago, that's for sure. Arsenal who rarely change anything, went to 3 at the back last spring along with many others. The new trend in formations also points to need for developing more intelligent players. In order to effectively play with 2 - 3 players in the back, an overloaded midfield and two forwards, players must be excellent decision makers and possess high soccer IQ's. Today's new formations demand players be smart and skillful, while the older bunker-in and counter attack systems (4-2-3-1 or 4-4-2) can more easily accommodate the simple, disciplined and hard-working player. It's my opinion that the modern player must be technical, creative, smart, have a high soccer IQ and be an active problem solver. As formations become more expansive and more dangerous, they also become more vulnerable, the player of the future must be a different breed, they must possess a complete soccer brain.

**Mixture Formation in Internal Combustion Engines** Dec 20 2021 A systematic control of mixture formation with modern high-pressure injection systems enables us to achieve considerable improvements of the combustion process in terms of reduced fuel consumption and engine-out raw emissions. However, because of the growing number of free parameters due to more flexible injection systems, variable valve trains, the application of different combustion concepts within different regions of the engine map, etc., the prediction of spray and mixture formation becomes increasingly complex. For this reason, the optimization of the in-cylinder processes using 3D computational fluid dynamics (CFD) becomes increasingly important. In these CFD codes, the detailed modeling of spray and mixture formation is a prerequisite for the correct calculation of the subsequent processes like ignition, combustion and formation of emissions. Although such simulation tools can be viewed as standard tools today, the predictive quality of the sub-models is constantly enhanced by a more accurate and detailed modeling of the relevant processes, and by the inclusion of new important mechanisms and effects that come along with the development of new injection systems and have not been considered so far. In this book the most widely used mathematical models for the simulation of spray and mixture formation in 3D CFD calculations are described and discussed. In order to give the reader an introduction into the complex processes, the book starts with a description of the fundamental mechanisms and categories of fuel injection, spray break-up, and mixture formation in internal combustion engines.

**Word-Formation in English** Dec 28 2019 This textbook provides an accessible introduction to the study of word-formation, that is, the ways in which new words are built on the bases of other words (e.g. happy - happy-ness), focusing on English. The book's didactic aim is to enable students with little or no prior linguistic knowledge to do their own practical analyses of complex words. Readers are familiarized with the necessary methodological tools to obtain and analyze relevant data and are shown how to relate their findings to theoretical problems and debates. The book is not written in the perspective of a particular theoretical framework and draws on insights from various research traditions, reflecting

important methodological and theoretical developments in the field. It is a textbook directed towards university students of English at all levels. It can also serve as a source book for teachers and advanced students, and as an up-to-date reference concerning many word-formation processes in English.
